Data in Many Forms...

Statistics Canada disseminates data in a variety of forms. In addition to publications, both standard and special tabulations are offered. Data are available on CD, diskette, computer print-outs, microfiche and microfilm, and magnetic tapes. Maps and other geographic reference materials are available for some types of data. Direct online access to aggregated information is possible through CANSIM, Statistics Canada's machine-readable database and retrieval system.

How to Obtain More Information

Inquiries about this publication and related statistics or services should be directed to:

Energy Section,
Industry Division,

Statistics Canada, Ottawa, K1A 0T6 Telephone:
(1-613-951-9823) or to the Statistics Canada
reference centre in:

| | | | |
|----------|------------------|-----------|------------------|
| Halifax | (1-902-426-5331) | Regina | (1-306-780-5405) |
| Montreal | (1-514-283-5725) | Edmonton | (1-403-495-3027) |
| Ottawa | (1-613-951-8116) | Calgary | (1-403-292-6717) |
| Toronto | (1-416-973-6586) | Vancouver | (1-604-666-3691) |
| Winnipeg | (1-204-983-4020) | | |

Toll-free access is provided for all users who **reside outside the local dialing area** of any of the Regional Reference Centres.

Standards of Service to the Public

To maintain quality service to the public, Statistics Canada follows established standards covering statistical products and services, delivery of statistical information, cost-recovered services and service to respondents. To obtain a copy of these service standards, please contact your nearest Statistics Canada Regional Reference Centre.

Des données sous plusieurs formes...

Statistique Canada diffuse les données sous formes diverses. Outre les publications, des totalisations habituelles et spéciales sont offertes. Les données sont disponibles sur disque compact, disquette, imprimés d'ordinateur, microfiches et microfilms et bandes magnétiques. Des cartes et d'autres documents de référence géographiques sont disponibles pour certaines sortes de données. L'accès direct à des données agrégées est possible par le truchement de CANSIM, la base de données ordinolingué et le système d'extraction de Statistique Canada.

Comment obtenir d'autres renseignements

Toutes demandes de renseignements au sujet de cette publication ou de statistiques et services connexes doivent être adressées à:

Section de l'énergie,
Division de l'industrie,

Statistique Canada, Ottawa, K1A 0T6 téléphone:
(1-613-951-9823) ou au centre de consultation de
Statistique Canada à:

Note of Appreciation

Canada owes the success of its statistical system
to a long-standing cooperation involving Statistics
Canada, the citizens of Canada, its businesses,
governments and other institutions. Accurate and
timely statistical information could not be produced
without their continued cooperation and goodwill.

Note de reconnaissance

Le succès du système statistique du Canada
repose sur un partenariat bien établi entre
Statistique Canada et la population, les entreprises,
les administrations canadiennes et les autres
organismes. Sans cette collaboration et cette bonne
volonté, il serait impossible de produire des
statistiques précises et actuelles.

Symbols

The following standard symbols are used in Statistics Canada publications:

- .. figures not available.
- ... figures not appropriate or not applicable.
- nil or zero.
- amount too small to be expressed.
- p preliminary figures.
- r revised figures.
- x confidential to meet secrecy requirements of the Statistics Act.
- * disposition of this secondary product is shown under the primary form thereof

Note

Data for any quarter in a calendar year may be revised and included in the cumulative tables of a subsequent quarterly issue of that year (such revisions are incorporated, by quarters, in the CANSIM data base). Given that further revisions to submitted data are received after the publication of the fourth quarter issue of any given year, it should be borne in mind that the statistical series shown in this publication are not necessarily the same in every detail as those shown in other annual publications produced by the Energy Section of Statistics Canada. These latter publications are usually published after the fourth quarter issue of this publication. From time to time revisions to previous years may be incorporated in the CANSIM data base.

Additional information

For more information, please contact Irfan Hashmi
Energy Section, Tel (613) 951-3501

The paper used in this publication meets the minimum requirements of American National Standard for Information Sciences - Permanence of Paper for Printed Library Materials, ANSI Z39.48 - 1984.

Signes conventionnels

Les signes conventionnels suivant sont employés uniformément dans les publications de Statistique Canada:

- .. nombres indisponibles.
- ... n'ayant pas lieu de figurer.
- néant ou zéro.
- nombres infimes.
- p nombres provisoires.
- r nombres rectifiés.
- x confidentiel en vertu des dispositions de la Loi sur la statistique relatives au secret.
- * la disposition de ce produit secondaire est comprise dans les données relatives à la forme primaire de ce même produit

Nota

On peut réviser et inclure les données d'un trimestre d'une année civile dans les tableaux cumulatifs d'un numéro ultérieur de cette même année, ces révisions sont incluses, par trimestre, dans la base de données de CANSIM. Comme d'autres révisions aux données soumises sont reçues après la publication numéro du quatrième trimestre d'une année donnée, il faut se rappeler que les séries statistiques figurant dans cette publication ne sont pas nécessairement les mêmes à tous les égards que celles présentées dans les publications annuelles produites par la Section de l'énergie de Statistique Canada. Ces dernières publications paraissent ordinairement après le numéro du quatrième trimestre de la présente publication. De temps à autre, des révisions pour des années précédentes peuvent être incluses dans la base de données de CANSIM.

Information supplémentaire

Pour tout renseignement supplémentaire, veuillez communiquer avec Gerrard O'Connor, Section de l'énergie, tél (613) 951-3562

Le papier utilisé dans la présente publication répond aux exigences minimales de l'American National Standard for Information Sciences - "Permanence of Paper for Printed Library Materials", ANSI Z39.48 - 1984.

Highlights

Energy Supply and Demand

Third Quarter 1995

Year-over-year growth in energy exports slowed dramatically during the third quarter of 1995 to 5.5%. This was in sharp contrast with the double digit rates seen over the previous two years. Energy exports are equivalent to 52.0% of total Canadian primary energy production, as a result, slower export growth had a direct effect on energy production in the third quarter of 1995. Energy production increased by only 3.0%, its lowest rate in over two years. Final energy demand in Canada increased by 4.8% in the third quarter of 1995.

The slowdown in energy exports in the third quarter of 1995 was widespread, affecting all the major energy forms. Electricity and coal exports actually contracted by 23.3% and 3.3% respectively. Natural gas exports rose by 9.0%, the smallest increase in almost two years. Crude oil exports grew by only 3.8%, dramatically lower than the 18.2% increase recorded in the previous quarter.

The general slowdown in exports can be attributed to events in the US. Demand for Canadian crude oil was dampened by US inventory reductions as well as a decrease in consumption by US refineries. US natural gas demand, especially by utilities, remained strong in the third quarter of 1995 but the recent surge in Canadian gas exports was moderated by a slower decline in US natural gas production. US electricity generation picked up in the third quarter of 1995, crowding out Canadian electricity exports. Canadian coal exports suffered from weaker demand from South Korea and Brazil.

Weak exports of energy products directly affected energy production in Canada during the third quarter of 1995. Crude oil production rose by only 1.2%, the smallest year-over-year increase in two-and-a-half years. Strong Canadian demand for natural gas, especially by public administration and commercial industries did not compensate for weak exports. Natural gas production increased 3.6% in the third quarter of 1995, the lowest increase in over four years. Coal production grew by 7.6% in the third quarter of 1995, in spite of exports nose-diving, resulting in large inventory build-ups.

Faits saillants

Disponibilité et écoulement d'énergie

Troisième trimestre de 1995

La croissance d'une année à l'autre des exportations d'énergie s'est ralentie de façon marquée au cours du troisième trimestre de 1995 pour s'établir à 5,5%. Il s'agit d'une nette démarcation par rapport aux deux années antérieures, où la hausse annuelle dépassait les 10%. Ce recul s'est directement fait ressentir sur la production d'énergie au troisième trimestre de 1995, puisque les exportations d'énergie absorbent 52,0% de la production totale d'énergie primaire au Canada. Ainsi, la production d'énergie n'a augmenté que de 3,0%, le taux le plus bas en plus de **deux ans**. **Au cours du troisième trimestre de 1995**, la demande finale d'énergie au Canada a progressé de 4,8%.

Le ralentissement des exportations d'énergie observé au troisième trimestre de 1995 était général et a affecté toutes les principales formes d'énergie. Les exportations d'électricité et de charbon se sont résorbées de 23,3% et de 3,3%, respectivement. De leur côté, les exportations de gaz naturel ont avancé de 9,0%, la plus faible hausse en près de deux ans. Les exportations de pétrole brut ne se sont pour leur part relevées que de 3,8%, un recul considérable comparativement à la hausse de 18,2% relevée au trimestre précédent.

C'est à la situation qui prévaut aux États-Unis qu'on doit l'affaiblissement général des exportations. En effet, la demande de pétrole brut canadien a subi les contrecoups de la réduction des stocks américains et d'une consommation plus modeste par les raffineries de ce pays. La demande américaine de gaz naturel, surtout celle des services publics, s'est maintenue durant le troisième trimestre, mais l'ascension récente des exportations canadiennes de gaz a été freinée par un affaiblissement moins marqué de la production de gaz naturel aux États-Unis. Au cours du même trimestre, la production d'électricité s'est raffermie aux États-Unis, faisant obstacle aux exportations canadiennes. Enfin, les exportations de charbon canadien ont été affectées par un fléchissement de la demande en Corée du Sud et au Brésil.

La faiblesse des exportations d'énergie a touché directement la production d'énergie au Canada pendant le troisième trimestre de 1995. La production de pétrole brut n'a augmenté que de 1,2%, la plus faible hausse d'une année à l'autre en trente mois. Par ailleurs, la forte demande canadienne de gaz naturel, surtout observée au niveau de l'administration publique et des secteurs commerciaux, n'a pu compenser pour des exportations anémiques. Durant le troisième trimestre de 1995, la production de gaz naturel s'est relevée de 3,6%, la plus faible hausse en plus de quatre ans. La production de charbon, par contre, s'est raffermie de 7,6%, malgré l'effondrement des exportations, ce qui a miné à une forte accumulation des stocks.

Canadian consumption of energy (final demand) grew by 4.8% in the third quarter of 1995. Final demand increased by 5.1% in the second quarter of 1995. Strong growth in final demand over these two quarters reflects a turnaround from the contraction in energy consumption recorded in the first quarter of 1995 and the last quarter of 1994. Continued strength in industrial and commercial energy consumption and a sharp increase in public administration energy consumption were behind the 4.8% rise in final demand. Since the first quarter of 1995 year-over-year increases in manufacturing energy-demand have been over 6% and the third quarter was no exception with an increase of 6.7%. Very strong demand by iron and steel, other manufacturing, and cement industries contributed to the growth in manufacturing energy consumption. Energy consumption by commercial industries jumped by 14.9% in the third quarter, continuing the double-digit growth recorded in the previous quarter. Agriculture and public administration registered similarly sharp increases in their energy consumption in the third quarter of 1995.

La consommation canadienne d'énergie (demande finale) s'est consolidée de 4,8% au troisième trimestre de 1995. Au cours du trimestre précédent, elle s'était relevée de 5,1%. La croissance appréciable de la demande finale au cours des six derniers mois induit que la décroissance de la consommation d'énergie observée au premier trimestre de 1995 et au dernier trimestre de 1994 est terminée. On attribue le relèvement de 4,8% de la demande finale à une consommation très ferme d'énergie dans les secteurs industriel et commercial, ainsi qu'à un net relèvement de la consommation dans le secteur public. La demande d'énergie dans le secteur manufacturier enregistre des hausses annuelles supérieures à 6% depuis le premier trimestre de 1995, et le troisième trimestre de 1995, n'a pas fait exception à la règle avec une augmentation de 6,7%. La croissance de la demande dans le secteur manufacturier résulte de la très forte consommation de la part des sidérurgies et des aciéries, des autres industries de fabrication et des cimenteries. Dans le secteur commercial, la demande d'énergie a fait un bond de 14,9% au troisième trimestre, poursuivant ainsi la croissance dans les deux chiffres notée au trimestre antérieur. Enfin, le secteur agricole et celui de l'administration publique ont enregistré de fortes hausses similaires de la consommation d'énergie au troisième trimestre de 1995.

Supply and Demand of Energy - Third Quarter 1995

Disponibilité et écoulement d'énergie au Canada - troisième trimestre de 1995

| | 1994 | 1995 | 1994 to 1995 1994 à 1995 |
|--|--------------|--------------|-----------------------------|
| | petajoules | | % change - en % |
| Production - Production | 3 430 | 3 533 | 3.0 |

Note: A 30 litre gasoline fill-up contains about one gigajoule of energy. A petajoule is one million gigajoules.

Note: Un plein d'essence de 30 litres contient environ un gigajoule d'énergie. Un pétajoule est égal à un million de gigajoules.

Acknowledgement:

The Industrial Consumption of Energy Survey was expanded in 1994 to improve the quality of the energy use data contained in this report and provide greater industry detail than previously available. Natural Resources Canada has provided the funding for the expansion of the survey. Space limitations preclude us from providing the full range of data in this report. If you are interested in detailed energy use tabulations for major energy industries, contact Serge Grenier at (613) 951-3566.

Remerciements:

L'Enquête sur la consommation industrielle d'énergie a connu une expansion d'échantillon en 1994 pour améliorer la qualité des données sur l'utilisation de l'énergie incluses dans ce rapport et fournir plus de détails au niveau industriel que ce qui était disponible auparavant. Ressources Naturelles Canada a fourni le financement pour l'expansion de l'enquête. Le manque d'espace nous empêche de fournir toutes les données disponibles dans ce rapport. Si vous désirez avoir des tableaux détaillés sur l'utilisation d'énergie pour consommatrices d'énergie veuillez communiquer avec Serge Grenier au (613) 951-3566.

DATA QUALITY AND METHODOLOGY

The data contained in this publication are derived primarily from monthly and quarterly surveys and administrative records received by Statistics Canada (STC), supplemented with data from the National Energy Board and the various energy producing provinces. In general, supply data (production, inventories, trade, etc.) are taken from monthly STC energy publications and disposition data as reported by the larger energy supply companies on quarterly questionnaires. The companies surveyed are the producers and large distributors of petroleum products, major electric utilities (some of which consolidate information from smaller utilities which they supply), industrial electricity producers, coal mines and the natural gas utility industry. Disposition data are supplemented by data obtained from a quarterly survey of the larger industrial energy consumers.

The validity of the published data is partly dependant on the ability of the responding industries to code customers in an accurate manner. However, many reporting companies, especially in the petroleum products area, have difficulty in determining the final consumers of the product, due to the presence of marketing agents, brokers, etc. Further, the final consumer may use the purchased product in a number of different industries; eg. an iron ore company which extracts and mills ore can also operate a railway system; or a company which operates cement plants can also have ready mix concrete plants, and a trucking fleet all under the same name; companies which have misleading names, which refer to an activity not carried out by the firm or who have changed their activity and not their name.

The universes for all surveys forming the basis of this publication are characterized by very few but very large respondents - Westcoast Energy, Dow Chemicals, Petro Canada, etc. In general no "sample" surveys of the energy producing and/or distribution industries are employed, rather surveys of the total universe form the basis of this publication. Selected energy forms used in the most energy intensive industries of the industrial sector and by electric utilities are monitored by surveying the largest establishment to verify selected data reported by the supply industries. In instances where annual data is available from other STC surveys, comparisons are made to ensure comparability. Those few areas where estimates have played a role are indicated in the section Notes on Individual Tables following.

QUALITÉ DES DONNÉES ET MÉTHODOLOGIE

Les données présentées ici sont établies principalement à partir d'enquêtes mensuelles et trimestrielles sur l'énergie et de dossiers administratifs de Statistique Canada (SC), que viennent compléter des données communiquées de l'Office national de l'énergie et des différentes provinces productrices d'énergie. En général, les données ayant trait à l'approvisionnement (production, stocks, commerce, etc.) proviennent des publications mensuelles sur l'énergie de SC et elles sont celles que les grandes compagnies déclarent sur les questionnaires trimestriels. Les entreprises enquêtées sont les producteurs et les principaux distributeurs de produits pétroliers, les grandes compagnies d'électricité (dont certaines consolident les renseignements provenant de services publics moins importants qu'elles fournissent), les producteurs industriels d'électricité, les mines de charbon et les compagnies de gaz naturel. Les données sur la disposition sont complémentées par des estimations obtenues d'une enquête trimestrielle auprès des industries à forte consommation d'énergie.

La validité des données publiées dépend en partie de la capacité des unités répondantes de coder les clients de façon appropriée. Cependant, bien des compagnies répondantes, surtout celles du secteur des produits pétroliers éprouvent des difficultés à déterminer les consommateurs finaux du produit en raison de la présence d'agents de commercialisation, de courtiers, etc., De plus, le consommateur final peut utiliser le produit qu'il achète dans plusieurs industries différentes. Quelques exemples: la compagnie qui s'occupe d'extraire et de broier du minerai de fer et qui exploite aussi un système ferroviaire; celle qui exploite des cimenteries et, sous la même raison sociale, des usines de béton prêt à l'emploi et un parc de camions; celle dont le nom peut induire en erreur en désignant une activité qu'elle n'exerce pas; ou celle qui a modifié son activité, mais pas sa raison sociale.

Les univers des enquêtes ayant servi à préparer la publication se caractérisent par un nombre peu élevé de répondants, mais non des moindres, tels que Westcoast Energy, Dow Chemicals et Petro Canada. En général, on n'utilise pas d'enquêtes par sondage des industries productrices et/ou distributrices d'énergie. Pour les fins de la publication, on a plutôt recours au recensement de l'univers total. Lorsqu'il s'agit de certaines utilisations de l'énergie par les branches du secteur ayant la plus forte intensité énergétique et par les compagnies d'électricité, on procède par enquête auprès des principaux établissements pour vérifier des données déclarées par les branches fournisseuses. Si les données annuelles peuvent être obtenues d'autres enquêtes de SC, on se livre à des comparaisons pour en assurer la comparabilité. La section appelée les **notes sur les tableaux** des données indique les quelques domaines pour lesquels ont servi les estimations.

kilo = 10^3
méga = 10^6
giga = 10^9
tera = 10^{12}
peta = 10^{15}

Energy conversion factors utilized, based on the gross heat of combustion, are as follows:

Les facteurs de conversion en terajoules calculés selon la chaleur brute de combustion sont les suivantes:

| Fuel type - Combustible | Natural unit - Unité naturelle | Conversion factor Coefficient de conversion terajoules |
|---|--------------------------------|---|
| Coal ¹ Charbon: ¹ | | |
| Anthracite | kilotonnes | 27.70 |
| Imported bituminous - Bitumineux importé | " | 29.00 |
| Canadian bituminous - Bitumineux canadien | | |
| Nfld. - T.N. | " | 28.50 |
| P.E.I. - I.P.É. | " | 28.50 |
| N.S. - N.E. | " | 28.50 |
| N.B. | " | 27.00 |
| Que. - Qué. | " | 28.50 |
| Ont. | " | 30.40 |
| Man. | " | 30.40 |
| Sask. | " | 30.40 |
| Alta. | " | 30.40 |
| B.C. - C.B. | " | 30.50 |
| Yukon & N.W.T. - Yukon & T.N.O. | " | 30.40 |
| Sub-bituminous - Sous-bitumineux | " | 18.30 |
| Lignite | " | 15.00 |
| Coke | " | 28.83 |
| Coke oven gas - Gaz de four à coke | gigalitres | 18.61 |
| Propane | megalitres - mégalitres | 25.53 |
| Butane | " | 28.62 |
| Ethane | " | 18.36 |
| LPG's - GPL | " | 27.12 ² |
| Crude oil - Pétrole brut | " | 38.93 ⁴ |
| Light & medium - Léger & moyen | " | 38.51 ² |
| Heavy - Lourd | " | 40.90 ² |
| Pentanes plus | " | 35.17 ² |
| Still gas - Gas de distillation | " | 41.73 ³ |
| Motor gasoline - Essence à moteur | " | 34.66 |
| Kerosene - Kérosène | " | 37.68 |
| Diesel - Huiles diesels | " | 38.68 |
| Light fuel oil - Mazouts légers | " | 38.68 |
| Heavy fuel oil - Mazouts lourds | " | 41.73 |
| Petroleum coke - Coke de pétrole | " | 42.38 |

| Steam - Vapeur | kilotonnes | 2.75 |
| Solid wood wastes - Déchets de bois | " | 18.00 |
| Spent pulping liquor - Lessive de pâte épuisée | " | 14.00 |

¹ Conversion factors revised for 1989. - Facteur révisé en 1989.

² Not used in calculations in this publication. - Pas employé dans les calculs de cette publication.

³ Still gas is expressed in cubic metres of heavy fuel oil equivalent. - Le gaz de distillation s'exprime en équivalent de mètre cube de mazout lourd.

⁴ Revised from year to year. - Révisé annuellement.

ADDITIONAL INFORMATION - INFORMATION SUPPLÉMENTAIRE

gallon = Canadian or Imperial gallon - gallon canadien ou gallon impérial

barrel - baril = Canadian barrel - baril canadien

tonne = metric tonne - tonne métrique

m³ = cubic metre - mètre cube

KJ = kilojoule

MJ = megajoule - mégajoule

GJ = gigajoule

TJ = terajoule

PJ = petajoule

1000 joules = 0.948 213 BTU's; (1 BTU = 1 054.615 joules)

1 litre = 0.219 97 gallon; (4.546 09 litres = 1 gallon)
= 0.264 17 U.S. gallon - gallon E.U.

1 barrel - baril = 0.158 987 m³ = 158.987 litres
= 34.972 gallons = 42 gallons U.S. - gallons E.U.

1 m³ = 1 000 litres = 219.969 gallons = 6.293 barrels - barils
= 35.314 7 cubic feet - pieds cubes; (0.283 28 m³ = 1 foot³ - pieds³)
= 264.172 U.S. gallons - gallons E.U.

1 kilogram - kilogramme = 2.204 62 pounds - livres; (0.453 592 kg = 1 pound - livre)

1 tonne = 1 000 kg = 1.102 31 (short) tons - tonne impériale
= 2 204.62 pounds - livres = 0.984 207 long ton - tonne britannique

162.3 barrels crude - barils de pétrole brut = 1 terajoule (TJ)

1 barrel crude - baril de pétrole brut = 6.159 gigajoule (GJ)

BTU/barrel to TJ/m³ = ((BTU/1000) * 6.636 7)

Approximate product weights - Le poids approximatif des produits

L.P.G.'s - GPL

1 m³ = 507.5 kg

Still gas - Gas de distillation

1 m³ = 468.7 kg

Aviation gasoline - Essence d'aviation

1 m³ = 704.4 kg

Motor gasoline - Essence à moteur

1 m³ = 745.2 kg

Aviation turbo fuel - Carburéacteurs pour turbine à gaz

1 m³ = 807.4 kg

Kerosene - Kérosène

1 m³ = 807.4 kg

Diesel - Huiles diésels

1 m³ = 839.5 kg

Light fuel oil - Mazouts légers

1 m³ = 839.5 kg

Heavy fuel oil - Mazouts lourds

1 m³ = 992.8 kg

Asphalt - Asphalte

1 m³ = 999.7 kg

Petroleum coke - Coke de pétrole

1 m³ = 1 199.3 kg

Lubs and greases - Huiles et graisses lubrifiantes

1 m³ = 938.9 kg

Notes on Individual Tables

Please use these notes in conjunction with the definitions presented following the tables.

Table S - Historical Energy Summary Table - Canada

Presents historical energy trends at the national level for selected items of measurement.

Degree Days Below 18 degrees Celsius or Heating Degree Days are used to monitor space heating requirements. Data are calculated by Environment Canada and measure the extent to which the outdoor mean temperature (the average of the maximum and minimum) falls below 18 degrees for each calendar day. The provincial and national figures have been developed by utilizing data for major population centres in each province.

Table S1 - Energy Summary Table

Allows the analysis of energy trends at the provincial level for items presented in Table S.

Tables A and B - Primary and Secondary Energy

These tables summarize data on primary and secondary energy forms. Energy products with both primary and secondary sources (steam, electricity and LPGs) have all their disposition accounted for under the primary energy form.

Coal (column 1). Data presented here are a summation of that presented in Table F. It should be noted that the heat content varies depending on the mine. For publication purposes, provincial heat contents has been established for each type of coal. Therefore, interprovincial movements, expressed in terajoules, may not balance at the Canada level.

The monthly publication **Coal and Coke Statistics**, Catalogue 26-002, is the source of the data for coal and coke, column 8. Coke oven gas, column 9, is derived from applying a factor of 0.227 against the amount of coal charged to coke ovens. This factor is based on information received from producers of coke.

Notes sur les tableaux

Veuillez vous servir de ces notes avec les définitions présentées après les tableaux.

Tableau S - Tableau chronologique sommaire de l'énergie - Canada

Présente les tendances historiques en matière d'énergie au niveau national pour certains postes servant de points de repère.

On utilise les **degrés-jours au-dessous de 18 degrés C** ou **degrés-jours de chauffage** pour vérifier les besoins en chauffage ambiant. Les données sont calculées par Environnement Canada et mesurent à quel point la température extérieure moyenne (la moyenne du maximum et du minimum) se situe au-dessous de 18 degrés C pour chaque jour de l'année. Les chiffres pour le Canada et les provinces ont été calculés à partir des données des principaux centres de population dans chaque province.

Tableau S1 - Tableau sommaire de l'énergie

Permet l'analyse des tendances énergétiques au niveau provincial pour les postes du tableau S.

Tableaux A et B - Énergie primaire et secondaire

Ces tableaux résument les données sur les formes d'énergie primaire et secondaire. Les produits énergétiques consommés provenant de sources primaires et secondaires (vapeur, électricité et GPL) figurent intégralement comme forme primaire de chacune.

Charbon (colonne 1). Les données présentées sont le résultat de la sommation des données du tableau F. Il faut remarquer que la teneur en chaleur varie selon la mine. Pour des fins de publication, les teneurs provinciales ont été établies pour chaque type de charbon. Les mouvements interprovinciaux, exprimés en térajoules, peuvent ne pas correspondre au total canadien.

La publication mensuelle **Statistiques sur le charbon et le coke**, catalogue 26-002, est la source des données pour le charbon et le coke, colonne 8. Les chiffres pour les gaz de four à coke, colonne 9, sont obtenus en multipliant par un facteur de 0,227 la quantité de charbon introduite dans les fours à cokerie. Ce facteur est basé sur l'information fournie par les producteurs de coke.

Crude Oil (column 2). Includes pentanes plus, condensate, crude bitumen and synthetic crude as well as conventional crude. Small amounts of crude are estimated and added to crude oil production in Alberta to cover the use of petroleum fuels used at the synthetic oil plants, which are not included in the production as reported by the Alberta Energy Conservation Board (AERCB). Starting in 1990, the enrichment of synthetic crude at the oil sands plants by the addition of hydrogen, which originates from natural gas, is included as an interproduct transfer. (See table 20.)

For reasons of confidentiality, imports of crude oil have been excluded from the tables relating to the individual Atlantic provinces. Similarly, all subsequent data points also exclude crude imports. However, Table 2, **Atlantic Provinces** does show imports into the region as a whole.

Inventory data used to calculate stock variation (line 5) are based on pipeline inventories (which are source province of origin and not the province in which they are held) and refinery inventories. The net effect of this method of calculating is to overstate some provinces and understate others. At the Canada level, however, these differences counter balance.

Any use of crude oil by sectors other than petroleum refineries is included in **other adjustments**, line 7.

The monthly publications **Refined Petroleum Products (RPP)** Catalogue 45-004, and **Crude Oil and Natural Gas Production**, Catalogue 26-006, plus data obtained from the Alberta Energy Conservation Board (AERCB) and administrative records are the sources of the data used to compile crude oil.

Natural Gas (column 3). A modified production is used in this publication instead of marketable production. This modified production is equal to gross production less reinjection and shrinkage, with the difference between the two shown as producer consumption. Production and producers consumption are modified to account for the amount of hydrocarbon gas produced and used as fuel in the oil sands/non-conventional sector of the oil and gas industry. As a result, production and producers consumption will not agree with data published in **Crude Oil and Natural Gas Production**. (See table 20).

Pétrole brut (colonne 2). Représente le pétrole brut classique ainsi que les pentanes plus, les condensats, le pétrole bitumineux et le pétrole synthétique. De faibles quantités de brut sont évaluées et ajoutées à la production de pétrole brut de l'Alberta pour couvrir l'utilisation de combustibles de pétrole utilisés dans les usines de pétrole synthétique, qui ne sont pas inclus dans la production signalée par l'Alberta Energy Conservation Board (AERCB). En 1990, l'hydrogène extrait du gaz naturel pour être ensuite introduit dans le pétrole brut synthétique aux installations de traitement des sables bitumineux est représenté comme un transfert inter-produit. (Voir tableau 20).

Pour des raisons de confidentialité, les importations de pétrole brut ont été exclues des tableaux en ce qui a trait à chacune des provinces de l'Atlantique. Parallèlement, toutes les données subséquentes excluent également les importations de pétrole brut. Cependant, le tableau 2, **Provinces de l'Atlantique**, n'indique pas d'importations dans l'ensemble de cette région.

Les données d'inventaire utilisées pour calculer la variation des stocks (ligne 5) sont basées sur les inventaires de pipeline (qui sont donnés pour la province d'origine et non la province dans laquelle ces inventaires sont retenus) et les inventaires de raffinerie. Cette méthode de calcul a pour effet net de surévaluer certaines provinces et d'en sous-évaluer d'autres. Ces différences s'annulent cependant au niveau national.

Toute utilisation de pétrole brut par les secteurs autres que les raffineries de pétrole est incluse dans **Autres ajustements**, ligne 7.

Les publications **Produits pétroliers raffinés (PPR)**, catalogue 45-004, et **Production de pétrole brut et de gaz naturel**, catalogue 26-006, et les données provenant de l'Alberta Energy Conservation Board (AERCB) et des registres administratifs sont les sources des données utilisées pour la compilation des chiffres sur le pétrole brut.

Gaz naturel (colonne 3). Cette publication montre une production modifiée au lieu de la production de gaz marchand. Cette production modifiée est égale à la production brute, moins les quantités injectées et les pertes au cours du traitement, la différence entre les deux se trouvant à la rubrique **Autoconsommation**. La production et la consommation des producteurs sont modifiées pour tenir compte de la quantité de gaz d'hydrocarbures produite et utilisée comme combustible dans le secteur non conventionnel des sables bitumineux de l'industrie du pétrole et du gaz. La production et la consommation des producteurs ne correspondent donc pas aux données publiées dans **Production de pétrole brut et de gaz naturel**. (Voir tableau 20).

Starting with 1990, natural gas used to produce hydrogen for the enrichment of synthetic crude oil or oil products produced by petroleum refineries is shown as an inter-product transfer.

Estimates for the non-energy use of natural gas have been derived from the monthly production of anhydrous ammonia, methanol and carbon black by plants which use natural gas as a feedstock in their processes. The estimates take into account that only certain companies producing the products listed above use natural gas as a feedstock. Gas used as fuel associated with feedstock gas is shown under "Chemicals". This usage can only be shown for the provinces where the data are not confidential (Canada is the sum of the published numbers only). In instances where the data is confidential, the feedstock is combined with the amounts used as fuel and shown under "Chemicals".

Natural Gas conversion factors are subject to fluctuations due to the varying heat content of the gas produced from different fields and to the processes to which the gas is subjected. Conversion factors are based on the heat content of natural gas as published in *Gas Utilities*, Catalogue 55-002. The factors are normally revised for the fourth quarter of a given year, resulting in revisions to the natural gas terajoule data for the first three quarters of the year.

The monthly publication *Gas Utilities*, Catalogue 55-002, and a Quarterly End Use Survey of *Gas Utilities* are the basic sources of data for Natural Gas.

Gas Plant NGLs (Natural Gas Liquids) (column 4). Includes propane, butane and ethane. Data shown here is a summation of data presented in Table B, column 1, and Table 14. Condensate produced by gas plants is included with crude oil, column 2. For the split of the products, see Table 16. Disposition shown is for both refinery produced propane and butane and for gas plant NGLs. See notes on Table 16 for the sources.

Primary Electricity (column 5). Production is for hydro and nuclear generated electricity. The assumption is made that international and interprovincial movements of electricity are from primary sources. As virtually all generation is supplied to a grid system, it is not possible to determine the dispositions of primary or secondary electricity. Disposition data for both primary and secondary electricity (columns 11) is presented here. Generation of nuclear electricity is given in Table 18.

A partir de 1990, le gaz naturel utilisé pour produire l'hydrogène pour l'enrichissement du pétrole brut synthétique ou des produits pétroliers par les raffineries de pétrole sont présentés comme un transfert inter-produit.

On a estimé des utilisations non énergétiques du gaz naturel à partir de statistiques mensuelles sur la production d'ammoniaque anhydre, de méthanol et de carbone par les usines dont la charge d'alimentation est le gaz naturel. Ces estimations tiennent compte du fait que seules certaines des entreprises fabriquant les produits énumérés utilisent le gaz naturel comme charge d'alimentation. Le gaz utilisé comme combustible avec un gaz d'alimentation figure sous la rubrique **produits chimiques**. Cet usage ne peut être indiqué que pour les provinces où les données ne sont pas confidentielles (le Canada est la somme des chiffres publiés seulement). Dans les cas où les données sont confidentielles, la charge d'alimentation est combinée aux quantités utilisées comme combustibles et indiquée à la rubrique **Produits chimiques**.

Les facteurs de conversion utilisés pour le gaz naturel sont sujets à des fluctuations en raison de la variation de l'enthalpie du gaz produit dans les différents secteurs et des procédés auxquels il est soumis. Les facteurs de conversion sont basés sur l'enthalpie du gaz naturel publiée dans *Services de gaz*, catalogue 55-002. Les facteurs sont normalement révisés pour le quatrième trimestre d'une année donnée, entraînant la révision des données sur la quantité de térajoules du gaz naturel pour les trois premiers trimestres de l'année.

Les principales sources de données pour le gaz naturel sont la publication mensuelle *Services de gaz*, catalogue 55-002, et le Quarterly End Use Survey of *Gas Utilities*.

LGN (liquides de gaz naturel) des usines de gaz (colonne 4). Comprend le propane, le butane et l'éthane. Les données présentées ici sont la somme des données présentées au tableau B, colonne 1, et au tableau 16. Le condensat produit par les usines de gaz figure à la rubrique du pétrole brut, colonne 2. Voir tableau 14 pour une ventilation de ces produits. L'écoulement donne à la fois le propane et le butane produits par les raffineries et les LGN des usines de gaz. Voir les notes au bas du tableau 16 pour les sources.

Électricité primaire (colonne 5). La production représente l'hydroélectricité et l'électricité nucléaire. On présume que la majorité des mouvements interprovinciaux et internationaux de l'énergie électrique proviennent de sources primaires. Étant donné que presque toute la production est fournie à un réseau de distribution, il n'est pas possible de connaître les proportions d'électricité primaire ou secondaire. La colonne 11 présente à la fois les données sur l'électricité primaire et secondaire. La production d'électricité nucléaire est donnée au tableau 18.

A Quarterly Survey of Supply and Disposition of Electricity is the source of data for both this publication and **Electric Power Statistics, Volume II**, catalogue 57-202.

Steam "sold" (column 6). Steam sold includes only known steam sales of large producers and therefore excludes any steam produced for own consumption as process steam or space heating. Primary production is from nuclear produced steam only. Biomass and geothermal produced steam sales will also be included as they come on stream.

In the natural units section of the table, secondary steam production differs from other energy forms in that it is shown under transferred from other fuels, steam generation (line 13) as a negative number (negative in order that the column will remain additive). In the terajoule section of the table, where the columns as well as the rows must be additive, the production is not shown in line 13, but rather added to primary steam and shown in line 14. This latter approach is followed to enable the summation across the columns. It is noted that production and availability of secondary steam should be indicated on the second page of the table, but due to space limitations is not included.

Secondary steam generation can be the product of dedicated steam plants or the result of co-generation of electricity and steam. For the dedicated plants the amount of fuels used are known, whereas for co-generation plants only an estimate of the fuels used for steam generation may be made.

Total primary (column 7). This is the summation of the supply of the various primary energy forms in terajoules. The values shown do not include any secondary steam. Sum of columns 1 to 6 inclusive.

Coke (column 8). See the note on Coal. The input coal for the coke plants is shown in the coal column line 11.

Coke Oven Gas (column 9). See the note on Coal. The production of coke oven gas is estimated from known coal coke production data. The thermal value of coal charged to coke ovens less the thermal value of the resultant coke production must equal the coke oven gas production, together with an allowance for heating and losses.

La publication **Électricité, disponibilité et écoulement**, trimestriel est la source des données à la fois pour la présente publication et les **Statistiques sur l'énergie électrique, volume II**, catalogue 57-202.

Vapeur vendue (colonne 6). Les ventes comprennent uniquement les ventes connues des grands producteurs et excluent par conséquent la vapeur produite pour consommation propre pour servir de vapeur de procédé ou chauffer les locaux. La production primaire indiquée est celle provenant de source nucléaire seulement. Les ventes de vapeur produite par la biomasse et les processus géothermiques seront également incluses lorsqu'elles deviendront suffisamment importantes.

Dans la partie du tableau exprimée en unités naturelles, la production secondaire est présentée sous la rubrique production de vapeur, à partir d'autres combustibles (ligne 13) comme une inscription négative (négative afin que la colonne puisse être additionnée). Dans la partie du tableau exprimée en térajoules, là où les colonnes ainsi que les rangées doivent s'additionner, la production n'est pas présentée à la ligne 13, mais plutôt ajoutée à la vapeur primaire et ainsi présentée à la ligne 14. Cette façon de procéder permet la sommation des diverses composantes de la colonne. À remarquer que la production et la disponibilité de vapeur de source secondaire doivent être indiquées à la seconde page du tableau mais qu'elles n'ont pas été incluses en raison du manque d'espace.

La production secondaire de vapeur peut être le produit d'usines dédiées à la production de vapeur ou le résultat de coproduction d'électricité et de vapeur. En ce qui a trait aux premières, on connaît les quantités de combustibles utilisées, alors que pour les usines de coproduction, on ne peut calculer qu'une approximation des combustibles utilisés pour produire de la vapeur.

Total primaire (colonne 7). C'est la somme de l'offre des diverses formes d'énergie primaire en térajoules. Les chiffres indiqués n'incluent aucune vapeur secondaire. Somme des colonnes 1 à 6 inclusivement.

Coke (colonne 8). Voir la note sur le charbon. L'approvisionnement en charbon des usines de coke est indiqué à la ligne 11 de la colonne du charbon.

Gaz de fours à coke (colonne 9). Voir la note sur le charbon. Les chiffres sur la production de gaz de fours à coke sont estimés à partir des données connues sur la production de coke de houille. La valeur thermique de la houille chargée dans les fours à coke, moins la valeur thermique du coke ainsi produit, doit être égale à la production de gaz de fours à coke, rectifiée pour tenir compte de la chaleur et des pertes.

Petroleum Products (column 10). For the summation of both primary and secondary items, this column is repeated here. See column 12 of **Tables C and D** following.

Secondary Electricity (column 11). This column presents the amount of electricity generated from thermal generation. The fuels used are shown in rows 9 and 10, and may include some fuel used for co-generation, for which adequate data is not available to enable the split of the fuels.

A breakdown of the amounts of thermal electricity generated from the various types of fuels is presented in Table 17. The sources of the data are as indicated for primary electricity, column 5. Disposition data is shown under primary electricity. Exports, imports, producers consumption (which includes line losses) is included under primary electricity.

The usage of heavy fuel oil, coal and natural gas for generation by utilities is as reported on either monthly or quarterly surveys. Natural gas usage however may be overstated in that the total usage of the electric utility, including that gas used for space heating, is measured. Estimates of diesel and light fuel oil consumption use known generation for the quarter, with the amounts of these fuels used being based on the previous year's reported consumption pattern.

Alberta bituminous coal used for electrical generation has a lower heat content than the bituminous coal produced for export. Given the dominance of the export market, the heat content used is that of coal produced for such shipments.

Estimates of fuels used and efficiencies for industrial generation are based on the establishment's annual report for the previous year.

For industrial establishments generating electricity with process steam, the energy required to produce the initial steam is excluded from estimates of fuels used in the generation of electricity. Only that energy

Produits pétroliers (colonne 10). Cette colonne est répétée pour présenter le résultat de la sommation des postes primaires et secondaires. Voir colonne 12 des **tableaux C et D** qui suivent.

Électricité secondaire (colonne 11). Cette colonne présente la quantité d'électricité produite par les centrales thermiques. Les combustibles utilisés sont présentés aux colonnes 9 et 10, et peuvent comprendre une certaine quantité de combustibles utilisés pour la cogénération, pour laquelle il n'existe pas de données adéquates pour répartir les combustibles.

Le tableau 17 donne une ventilation des quantités d'électricité thermique produites à partir des divers types de combustibles. Les sources de données sont les mêmes que pour l'électricité primaire, colonne 5. Les données sur l'écoulement sont indiquées à la rubrique de l'électricité primaire. Les exportations, les importations, l'autoconsommation (qui comprend les pertes) sont également incluses dans cette rubrique.

L'utilisation de mazout lourd, de charbon et de gaz naturel pour la production d'électricité par les compagnies de services est celle signalée dans les enquêtes mensuelles ou trimestrielles. L'utilisation du gaz naturel est probablement surévaluée étant donné que cette rubrique mesure la quantité totale de gaz utilisée par les compagnies d'électricité, y compris le gaz utilisé pour le chauffage des locaux. Les estimations de la consommation de diesel et d'huile légère fait appel à la production connue pour le trimestre, qui correspond aux quantités de combustibles utilisées basées sur la consommation signalée de l'année précédente.

Le charbon bitumineux de l'Alberta, utilisé pour la production d'électricité, a une teneur en chaleur inférieure à celle du charbon bitumineux produit pour l'exportation. Étant donné l'importance du marché de l'importation, la teneur en chaleur utilisée est celle du charbon produit pour ces expéditions.

Les estimations des combustibles utilisés pour la production industrielle et de leur rendement sont basées sur le rapport annuel de l'année précédente de chaque installation.

Dans le cas des établissements industriels produisant de l'électricité à l'aide de la vapeur de procédé, l'énergie requise pour produire la vapeur initiale est exclue des estimations des combustibles utilisés dans

needed to super-heat the steam for use in the turbine/generator is considered in these estimates. As a consequence efficiencies of 65% to 70% result. This contrasts to the generation by electric utilities, where all heat losses are ascribed to electricity generation, resulting in efficiencies ranging between 30% and 40% for most operations.

For most gas turbine and internal combustion generation, reported efficiencies will be in the range of 20 to 35% for both utilities and industry. However, some newer gas turbine have efficiencies of between 70 and 80%

Total Primary and Secondary (column 12). This is the summation of the various primary and secondary energy sources, columns 1 to 11. Values for production and availability are not shown as these would lead to double-counting of fuels which are both a primary energy form and used to produce a secondary energy form.

Tables C and D - Refined Petroleum Products

Due to confidentiality requirements, data for the Northwest Territories and Saskatchewan for selected crude oil items and for the production of refined petroleum products (RPP) are no longer being published. Although the combined RPP data are not being published in this publication, they are available in the RPP publication.

The item "other adjustments", line 7, is the combination of various RPP items, and is composed as follows:

- + receipts from reporting companies
- + receipts from non-reporting companies
- deliveries to reporting companies
- losses and adjustments
- transfers to feedstock

A comparison of refinery inputs (line 12, Tables A & B) against the production of refinery petroleum products, Tables B and C, line 1, presents an inflated volumetric gain in the refinery process. This inflated gain results to an extent from the partially refined products used as input in the refinery process that are contained in line 7 of the tables. That is, refinery inputs are understated by the amount transferred to refinery feedstock as reported in the RPP.

la production d'électricité. Seule l'énergie nécessaire pour surchauffer la vapeur afin de l'utiliser dans une turbine ou un générateur est prise en compte dans ces estimations. On obtient donc des rendements de 65 à 70% qui contrastent avec la production des compagnies d'électricité où toutes les pertes de chaleur sont imputées à la production d'électricité, donnant des rendements variant entre 30 et 40% dans la plupart des cas.

Dans le cas de la majeure partie de la production d'électricité à partir de turbines à gaz et de moteurs à combustion interne, les rendements signalés sont de l'ordre de 20 à 35%, aussi bien pour les compagnies d'électricité que pour l'industrie. Cependant, certaines turbines à gaz nouvellement conçues ont un rendement de 70 à 80%.

Total primaire et secondaire (colonne 12). Il s'agit de la somme des diverses sources d'énergie primaires et secondaires, colonnes 1 à 11. Les valeurs de la production et de la disponibilité ne sont pas présentées étant donné qu'elles entraîneraient un double comptage des combustibles qui sont une forme d'énergie primaire et qui sont utilisés pour produire une forme d'énergie secondaire.

Tableaux C et D - Produits pétroliers raffinés

Conformément aux exigences en matière de confidentialité, les données des Territoires du Nord-Ouest et de la Saskatchewan ne sont plus publiées pour certains postes relativement au pétrole brut et la production de produits pétroliers raffinés (PPR). Bien que les données agrégées sur les PPR ne figurent plus dans la présente publication, elles sont disponibles dans la publication sur les produits pétroliers raffinés.

Le poste **autres ajustements**, ligne 7, combine divers postes de PPR et est composé comme suit:

- + arrivages des sociétés déclarantes
- + arrivages des sociétés non déclarantes
- livraisons aux sociétés déclarantes
- pertes et ajustements
- transferts à l'alimentation

Une comparaison des intrants des raffineries (ligne 12, tableaux A et B) par rapport à la production de produits pétroliers raffinés, tableaux B et C, ligne 1, présente un gain volumétrique surévalué dans le procédé de raffinage. Ce dernier provient jusqu'à un certain point des produits partiellement raffinés utilisés comme intrants dans le procédé de raffinage, contenus à la ligne 7 des tableaux. C'est-à-dire que les intrants de raffinerie sont sous-évalués par la quantité transférée à l'alimentation de la raffinerie, telle que signalée dans les PPR.

The result of this change in presentation has been that the **statistical difference** in most instances has been reduced and that availability less producers consumption will now agree with **net sales** as presented in the RPP, with the following exceptions:

- interprovincial transfers may be modified to reflect movements which are indicated by supplementary data used in the completion of the demand section of the tables.
- stock changes for diesel, light fuel oil and heavy fuel oil may include changes in inventory held by electric utility stations.
- additional information on oil products produced and used in the oil sands/non-conventional sector of the oil and gas industry are included. Estimates of the crude oil that would have been needed to produce these non-refinery products has also been included and consequently data on crude oil supply and disposition contained in this publication may differ from that shown in the RPP and Crude Oil and Natural Gas publications.
- timing of data selection can affect the calculation of supply data. That is, the inclusion or exclusion of RPP revisions may cause different results.

These tables summarize the activity of Canadian petroleum refineries and the imports of petroleum products. The supply data for all products are derived from monthly **Refined Petroleum Products** and from administrative records. Disposition data are from a quarterly survey of the respondents to the monthly survey.

Because of confidentiality and because of the way in which certain fuels are used, a specific method of combining industries has been employed in the body of this publication. This pattern is detailed in Text Table I at the end of these notes.

Refinery LPGs (Liquified petroleum gases) (column 1). The disposition data is combined with that of NGLs in column 4 of Tables A and B. See notes for Table 14.

Par suite de ce changement de présentation, la **différence statistique** a été plus faible dans la plupart des cas et la disponibilité, moins l'autoconsommation, correspondra dorénavant aux **ventes nettes** telles que présentées dans les PPR, sauf dans les cas suivants:

- Les transferts interprovinciaux seront modifiés le cas échéant pour refléter les mouvements qui ressortent des données supplémentaires utilisées pour compléter la section des tableaux ayant trait à la demande.
- Les variations des stocks de carburant diesel, de mazout léger et de mazout lourd pourront inclure les variations des stocks détenus par les centrales électriques.
- Des renseignements additionnels au sujet des produits oléagineux fabriqués et utilisés dans le secteur des sables bitumineux et le secteur non classique de l'industrie pétrolière et gazière sont inclus. Les estimations de la quantité de pétrole brut qui aurait été requise pour fabriquer ces produits sont aussi présentes et, par conséquent, les données sur l'offre et l'écoulement de pétrole brut dans cette publication diffèrent des chiffres des PPR et de la publication **Production de pétrole brut et de gaz naturel**.
- Le moment de la sélection des données influencera parfois le calcul des données sur la disponibilité. Autrement dit, les résultats pourront varier selon que l'on aura ou non pris en compte les révisions pour les PPR.

Ces tableaux résument l'activité des raffineries de pétrole canadiennes et les importations de produits pétroliers. Les données sur l'offre pour tous les produits proviennent de la publication mensuelle **Produits pétroliers raffinés** et des registres administratifs. Les données sur l'écoulement proviennent d'une enquête trimestrielle faite auprès des répondants à l'enquête mensuelle.

A cause des exigences en matière de confidentialité, ainsi que la façon dont certains combustibles sont utilisés, on a eu recours à une méthode particulière de combinaison des industries pour la publication des chiffres dans ce bulletin. Ce schéma est indiqué au tableau explicatif I et à la fin des présentes notes.

GPL des raffineries (gaz pétroliers liquéfiés) (colonne 1). Les données sur l'utilisation sont combinées à celles des LNG, à la colonne 4 des tableaux A et B. Voir notes pour le tableau 14.

Still Gas (column 2). Almost all still gas is used within the producing refinery; only small amounts are being sold, and these appear as interproduct transfers.

Kerosene & Stove Oil and Light Fuel Oil (columns 4 and 6). Since only small amounts are used within the manufacturing sector, and in most instances are confidential, all usage in manufacturing is shown as other manufacturing.

(Total) Non-energy Products (column 11). For the summation of all refinery products, the total column of Table E is repeated here. See Table E. Data for the individual products presented in Table E are converted to terajoules and summarized for inclusion here in the terajoule portion of this table.

Total Products (column 12). This column is the summation of the individual products, columns 1 to 11. Excluded is the disposition of propane and butane which are shown under Gas Plant NGLs. This column is carried forward as column 11 of Tables A and B.

Table E - Non-Energy Refined Petroleum Products

Although this table shows the final sector of disposition, **all of the usage** is non-energy use. When shown in Tables C and D all usage is considered to be non-energy use and is included in line 16.

Petrochemical Feedstocks (column 1 or 7). Refinery gases or other first derivatives of petroleum for use as raw material for further processing. Includes LPGs, crude tops, crude bottoms, lube oils for recycling and any other product used as petrochemical feedstock.

Naphtha Specialties (columns 2 or 8). Industrial and commercial solvents, lighting naphtha, mineral spirits and paint thinners. Since the largest portion of these items is used in the commercial sector (dry cleaning plants), the total is attributed to this use.

Lubricating Oils and Greases (columns 4 or 10). A more complete breakdown of the uses of lubricating oil and of greases is available in the publication **Energy Statistics Handbook**, catalogue 57-601, as well as in CANSIM, matrices 4945 and 4946. Data for both products are presented by region and for mining, manufacturing, government & commercial, and other sectors.

Gaz de distillation (colonne 2). Presque tous les gaz de distillation sont utilisés à l'intérieur de la raffinerie qui les produit; seules de faibles quantités sont vendues, et ces quantités apparaissent dans les transferts inter-produits.

Mazouts pour poêles et mazouts légers (colonnes 4 et 6). Étant donné que seules de faibles quantités sont utilisées dans le secteur de la fabrication, et que dans la plupart des cas ces données sont confidentielles, tout usage dans ce secteur est indiqué dans la rubrique manufacturier-autres.

(Total) Produits non énergétiques (colonne 11). La colonne total du tableau E est répétée pour faire la somme de tous les produits de raffinerie. Voir tableau E. Les données relatives à chaque produit, présentées au tableau E, sont converties en térajoules et résumées pour être incluses ici dans la partie térajoule du tableau.

Total des produits (colonne 12). Cette colonne est la somme de tous les produits, colonnes 1 à 11, à l'exception de l'utilisation du propane et du butane, qui sont présentées dans la rubrique LGN des usines de gaz. Cette colonne est transportée à la colonne 11 des tableaux A et B.

Tableau E - Produits pétroliers raffinés non énergétiques

Bien que ce tableau présente le secteur final de l'utilisation, **toute l'utilisation** est non énergétique. Lorsqu'elle est présentée dans les tableaux C et D, toute l'utilisation est considérée comme étant une utilisation non énergétique et incluse à la ligne 16.

Alimentation pétrochimique (colonne 1 ou 7). Les gaz de raffinerie ou autres premiers dérivés du pétrole utilisés comme matière première en vue d'un traitement ultérieur. Comprend les GPL, les produits de tête, les produits de queue, les huiles de lubrification pour le recyclage et tout autre produit utilisé comme alimentation pétrochimique.

Produits spéciaux - base-naphte (colonne 2 ou 8). Les solvants industriels et commerciaux, le naphte utilisé pour l'éclairage, les alcools minéraux et les diluants pour peintures. Étant donné que la majeure partie de ces produits sont utilisés dans le secteur commercial (usines de nettoyage à sec), la totalité est attribuée à cette utilisation.

Huiles et graisses lubrifiantes (colonne 4 ou 10). Une ventilation plus complète des utilisations des huiles et graisses lubrifiantes se trouve dans la publication intitulée **Guide statistique sur l'énergie**, catalogue 57-601, ainsi que dans les matrices 4945 et 4946 du CANSIM. Les données sur ces deux produits sont présentées par région et pour les secteurs minier, manufacturier, gouvernemental, commercial et autres.

Other Products (columns 5 or 10). Includes waxes, paraffin and unfinished products (items which cannot be identified in end product terms).

Table F - Coal Details

The supply and usage of the various coal types are presented in natural units only. By applying the conversion factors for the various types of coal, for each province, data in this table is combined and presented as column 1 of Tables A and B.

Table 16 - Details of Natural Gas Liquids

Data for the supply section of this table comes from various sources, the National Energy Board, the individual producing provinces, and administrative records. Disposition data are estimated based on known usage and consultation with the largest distributors. The validity of the usage estimates is a function of classifications and regionalization used by the distributors, and the ability in determining the final consumers.

Data in lines 1 to 12 and 15 are for gas plants only. Refinery produced propane and butane supply items are shown in Tables C and D, column 1. Line 13 of this table, Table 14, allows the entry of the refinery produced products into the gas plant stream. This line is the availability less producers consumption of propane and butane shown in Tables C and D.

Table 17 - Electricity Generated from Fossil Fuels

This table presents a breakdown of the thermal electricity generated from the various fossil fuels as presented in Tables A and B, column 11. Included are the amounts of electricity generated from fuel types excluded from the main tables, i.e. wood waste, spent pulping liquor, waste heat, blast furnace gas, petroleum coke, station services, etc.

The first section of the table presents the total generation by utilities and industry, by quarter. The second part presents the total and year-to-date generated by utilities only.

Autres produits (colonne 5 ou 10). Comprend les cires, les paraffines et autres produits non finis (postes qui ne peuvent être identifiés en termes de produit final).

Tableau F - Renseignements détaillés sur le charbon

L'offre et l'utilisation des divers types de charbon sont présentées en unités naturelles seulement. En appliquant les facteurs de conversion aux divers types de charbon, pour chaque province, les données de ce tableau sont combinées et présentées à la colonne 1 des tableaux A et B.

Tableau 16 - Détails des liquides de gaz naturels

Les données pour la section de ce tableau portant sur l'offre proviennent de diverses sources: l'Office national de l'énergie, les provinces productrices et les registres administratifs. Les données sur l'écoulement sont calculées à partir des données connues sur l'utilisation et en consultation avec les plus gros distributeurs. La validité des estimations de l'utilisation dépend des classifications et de la régionalisation utilisées par les distributeurs, et sur l'aptitude à cerner les consommateurs de bout de ligne.

Les données des lignes 1 à 12 et 15 se rapportent seulement aux usines de gaz. Les postes sur l'approvisionnement en propane et butane produits par les raffineries figurent à la colonne 1 des tableaux C et D. La ligne 13 du tableau 14 permet d'entrer les produits de raffinerie dans le flux de l'usine de gaz. Cette ligne représente la disponibilité moins l'autoconsommation de propane et de butane indiquée aux tableaux C et D.

Tableau 17 - Électricité produite à partir de combustibles fossiles

Ce tableau présente une ventilation de l'électricité thermique produite à partir de divers combustibles fossiles, tel que présenté à la colonne 11 des tableaux A et B. On y trouve les quantités d'électricité produites à partir des types de combustibles, provenant des principaux tableaux, c.-à-d. les déchets de bois, la lessive de pâte épuisée, la chaleur résiduaire, les gaz des hauts fourneaux, le coke de pétrole, consommation de centrale, etc.

La première section du tableau présente la production totale par les compagnies d'électricité et l'industrie, par trimestre. La deuxième partie présente le total et le cumulatif de l'année pour les compagnies d'électricité seulement.

Table 18 - Primary Electricity Generation

This table presents the amount of electricity production shown in Tables A and B, column 5, which is of nuclear generation. Uranium used is based on the heat content as received annually from the utilities concerned. This data was formerly presented as part of Text Table II.

Table 19 - Wood Waste and Spent Pulping Liquor

The main tables of this publication do not include alternative energy sources, although it is estimated that these sources account for more than 7% of Canada's energy requirements. However, electricity produced by biomass has been included in the tables. For regional estimates of biomass usage in the period 1982-1983, refer to the 1987 issues of this publication, Text Table III.

Data shown here is the amount of wood waste and spent pulping liquor used by the wood industries and the pulp and paper industries to generate process steam, steam for space heat as well as to produce electricity. The coverage is not complete, only those plants which are members of the Canadian Pulp and Paper Association and known users who are not members.

Data which is received is standardized based on heat content before inclusion in this publication.

Table 21 - Estimated Additions to Crude Oil

In the upstream oilsands and heavy oil extraction processes, fuel of own production is used. Natural gas/hydrocarbon gas is obtained during the separation stage of the production of heavy crude from the steam injection process. Natural gas/hydrocarbon gas, diesel/synthetic crude/naphtha are obtained during the separation stages of the oilsand extraction, which are used by the producing plants.

During the processing in the oilsands plants and in the heavy oil upgraders, hydrogen treatment of the heavy crude is carried out, a process which results in a volumetric gain in the amount of crude oil which the plants produce.

Tableau 18 - Production d'électricité primaire

Ce tableau présente la quantité d'électricité produite, indiquée à la colonne 5 des tableaux A et B, qui est la production nucléaire. L'uranium utilisé est calculé en fonction de la teneur en chaleur reçue annuellement par les compagnies concernées. Ces données ont été officiellement présentées dans le cadre du tableau explicatif II.

Tableau 19 - Déchets de bois et lessive de pâte épuisée

Les principaux tableaux de cette publication ne contiennent pas les sources d'énergie de remplacement, bien que l'on évalue que ces sources répondent à plus de 7% des besoins énergétiques du Canada. Cependant, l'électricité produite par la biomasse a été incluse dans les tableaux. Pour les évaluations régionales de l'utilisation de la biomasse au cours de la période de 1982-1983, il faut se référer aux numéros de 1987 de cette publication, tableau explicatif III.

Les données présentées dans ce tableau sont la quantité de déchets de bois et de lessive de pâte épuisée utilisée par les industries du bois et la quantité de pâtes et papiers utilisée pour produire de la vapeur de procédé, de la vapeur pour le chauffage ambiant et de l'électricité. Ce tableau ne couvre cependant que les compagnies membres de l'Association canadienne des producteurs de pâtes et papiers et les utilisateurs connus qui ne sont pas membres.

Les données reçues ont été normalisées en fonction de la teneur en chaleur avant d'être introduites dans cette publication.

Tableau 21 - Ajouts estimatifs à la production de pétrole brut

Dans les processus en amont d'extraction du pétrole brut et des sables bitumineux, on utilise du combustible de production propre. On obtient du gaz naturel/d'hydrocarbures pendant l'étape au cours de laquelle le pétrole lourd est séparé du processus d'injection de vapeur. Le gaz naturel/d'hydrocarbures, le diesel, le pétrole brut synthétique et le naphta sont obtenus pendant les étapes de séparation du processus d'extraction des sables bitumineux qu'utilisent les usines de production.

Dans les usines de traitement de sables bitumineux et les usines de valorisation du pétrole lourd, un traitement d'hydrogène du pétrole lourd est effectué; il s'agit d'un processus qui entraîne un gain volumétrique de la quantité de pétrole brut que l'usine produit.

This table provides the volumes of these usages/gains reported in the main tables of this report as an increase in production or interproduct transfers, with disposition reported as producer consumption or as usage in the mining industry. The volumetric gain in the crude oil due to the hydrogen treatment is shown as a reduction in crude production and an interproduct transfer into the crude oil stream.

Advance Information

It is possible to obtain most of the information contained in this publication some two to three weeks before it is available in printed form. The Canadian Socio-Economic Information Management System (CANSIM), which is Statistics Canada's computerized data bank, contains data in natural units for tables A, C, E and F in matrices 4950 to 4962. For data in terajoules for tables A and C refer to matrices 7976 to 8001. Data on uses of lubricating oils and greases can be found in matrices 4945 and 4946.

Le tableau présente les emplois et les gains qui figurent dans les principaux tableaux du présent rapport comme une hausse de la production ou des transferts inter-produits, l'utilisation déclarée étant l'autoconsommation ou l'emploi dans l'industrie minière. Le gain volumétrique de la quantité de pétrole brut attribuable au traitement d'hydrogène est présenté comme une réduction de la production de pétrole brut et un transfert inter-produit dans le circuit du pétrole brut.

Information anticipée

Il est possible d'obtenir certaines informations contenues dans cette publication, trois ou quatre semaines avant la copie imprimée. Le Système canadien d'information socio-économique (CANSIM), qui est la banque de données informatisée de Statistique Canada, renferme des données en unités naturelles pour les tableaux A, C, E et F, aux matrices 4950 à 4962. Se reporter aux matrices 7976 à 8001 pour les données en téra-joules des tableaux A et C. Les données sur l'utilisation des huiles et graisses lubrifiantes se trouvent aux matrices 4945 et 4946.

| | year to date cumulatif | " | 2 399.1 | 2 446.9 | 2 587.9 | 2 597.9 | 2 072.0 | 2 165.8 | 2 446.5 |

Crude oil production for own use in natural units (as above) plus petroleum coke in natural units (as above) plus diesel in natural units (as above).
Less interproduct transfers from natural gas in natural units (as above).
Production de pétrole brut pour autoconsommation en unités (voir ci-haut) plus le coke de pétrole en unités (voir ci-haut) plus le diesel en unités (voir ci-haut) moins les transferts inter-produits de gaz naturel en unités (voir ci-haut).

Definitions

Inter-regional Transfers line 4. Shows the net movement of product in and out of the province with relation to other provinces.

Interproduct Transfers line 6. Shows the transfer of similar products between different product forms, eg. still gas to natural gas, natural gas to produce hydrogen in petroleum refineries.

Other Adjustments line 7. There are varying factors depending on the product. In all cases cyclical billing, or timing differences can/are included here. Includes losses in transportation, metering differences, and in the case of crude oil, sales to non-refineries. For refined petroleum products see notes on Tables C and D in the Notes On Individual Tables section at the front of the publication.

Availability line 8. The amount which was available for use. The summation of lines 1, 3, 4, 6 and 7 less lines 2 and 5.

Net Supply line 14. The amount "available" after the amounts used in transformation processes are subtracted. Line 8 less lines 9 to 13.

Producers Consumption line 15. Producer consumption as measured here is the consumption by the producing industry of its own produced fuel - for example refined petroleum products consumed by the petroleum refining industry, or field and plant flare and usage by the natural gas industry. It does not include consumption of energy forms produced by other energy supply industries - for example, it would exclude the use of natural gas by the petroleum refining industry. In the case of electricity it includes transmission losses, adjustments, "unaccounted for" amounts which are subject to variation because of cyclical billing, etc., but excludes generating station use output as measured at the "generating station gate". Included is shrinkage at gas plants.

Non-energy Use line 16. Amounts shown here are for amounts used for purposes other than fuel purposes. Includes products being used as petro-chemical feedstock, anodes/cathodes, greases, lubricants, etc.

Définitions

Transferts inter-régions ligne 4. Déplacement net des produits à l'intérieur et à l'extérieur de la province par rapport aux autres provinces.

Transferts inter-produits ligne 6. Transferts de produits semblables entre les diverses formes de produits, c.-à-d. gaz de fours vers gaz naturel, gaz naturel pour produire de l'hydrogène dans les raffineries de pétrole.

Autres ajustements ligne 7. Divers facteurs dépendent du produit. Dans tous les cas, cette ligne comprend la facturation proportionnelle ou les différences chronologiques. Elle comprend également les pertes dans le transport, les différences de lecture, et dans le cas du pétrole brut, les ventes aux non-raffineries. Voir les notes sur les tableaux C et D, dans la section des Notes sur les tableaux, au début de la publication, pour les produits pétroliers raffinés.

Disponibilité ligne 8. Quantité qui était disponible pour utilisation. La somme des lignes 1, 3, 4, 6 et 7, moins les lignes 2 et 5.

Disponibilité nette ligne 14. Quantité disponible après soustraction des quantités utilisées dans les procédés de transformation. Ligne 8 moins lignes 9 à 13.

Autoconsommation ligne 15. L'autoconsommation mesurée ici est la consommation par l'industrie du combustible qu'elle produit - par exemple, les produits pétroliers raffinés consommés par l'industrie de raffinage du pétrole, ou le gaz brûlé et utilisé sur le terrain et dans l'usine par l'industrie du gaz naturel. Les quantités indiquées ne comprennent pas la consommation des formes d'énergie produites par d'autres industries d'approvisionnement en énergie - par exemple, ces chiffres excluent l'utilisation du gaz naturel par l'industrie du raffinage du pétrole. Dans le cas de l'électricité, ils comprennent les pertes de transmission, les ajustements, les quantités non imputées sujettes à certaines variations à cause de la facturation proportionnelle, etc., mais excluent les extrants de l'utilisation de la station productrice mesurés à la porte de la station productrice. Les pertes en cours de traitement dans les usines de gaz sont incluses.

Usage non énergétique ligne 16. Les quantités présentées dans ce tableau sont celles utilisées à des fins autres que combustibles. Ces quantités comprennent des produits utilisés comme alimentation pétrochimique, anodes/cathodes, graisses, lubrifiants, etc.

Energy Use - Final Demand line 17. The summation of the usage in lines 18 to 45.

Total Mining line 19. Includes metal mines, non metal mines, coal mines, crude petroleum and natural gas industries, stone quarries, gravel pits and contract drilling operations. SICs 061, 062, 063, 071, 081, 0911 and 0921.

Pulp and Paper and Sawmills line 20. Includes establishments in the sawmill and pulp and paper industries. SICs 2512 and 271.

Iron and Steel line 21. Establishments operating blast furnaces, casting mills, rolling mills or coke ovens operated in association with blast furnaces. SIC 291.

Smelting and Refining line 22. Establishments engaged in the primary production of aluminum and in the refining of non-ferrous metals. SIC 295.

Cement line 23. Establishments engaged in the manufacturing of (hydraulic) cement. SIC 352. This classification does not include concrete nor ready mix concrete operations.

Petroleum Refining line 24. Establishments engaged in manufacturing refined petroleum products including fuels and blended oils and greases. SIC 361.

Chemicals line 25. Establishments engaged in manufacturing industrial organic and inorganic chemicals and chemical fertilizers. SICs 371 and 3721.

Other Manufacturing line 26. All other manufacturing industries not listed above. SICs 101 to 399 less 2512, 271, 295, 352, 361, 371 and 3721. In some instances this classification is used when no breakdown of the component manufacturing industries is provided.

Total Manufacturing line 27. The summation of manufacturing industries, lines 20 to 26.

Construction line 29. SICs 401 to 429. Sales of asphalt, in Table E, for paving purposes regardless of the purchaser are included here.

Total Industrial line 30. The total of the usage in the Mining, Manufacturing, Forestry and Construction sectors, lines 19, 27, 28 and 29.

Usage énergétique - demande finale ligne 17. La somme des usages des lignes 18 à 45.

Total minier ligne 19. Les mines de métaux, les mines de non métaux, les mines de charbon, l'industrie du pétrole brut et du gaz naturel, les carrières de pierres, les carrières de gravier et les activités de forage à forfait. CTI 061, 062, 063, 071, 081, 082, 0911 et 0921.

Pâtes et papier et scieries ligne 20. Les établissements des industries de sciage du bois et de pâtes et papiers. CTI 2512 et 271.

Sidérurgie ligne 21. Les établissements exploitant des hauts fourneaux, des fours de moulage, des fonderies, des lamineries ou des fours à coke exploités conjointement avec des hauts fourneaux. CTI 291.

Fonte et affinage ligne 22. Les établissements qui s'occupent de la production primaire d'aluminium et du raffinage des métaux non ferreux. CTI 291.

Ciment ligne 23. Les établissements qui s'occupent de la fabrication (hydraulique) du ciment. CTI 352. Cette classification ne comprend pas le béton ni les centrales à béton.

Raffinage pétrolier ligne 24. Les établissements qui s'occupent de la fabrication de produits pétroliers raffinés, notamment les carburants et les huiles et graisses mélangés. CTI 361.

Produits chimiques ligne 25. Les établissements qui s'occupent de la fabrication de produits chimiques industriels organiques et inorganiques et de fertilisants chimiques. CTI 371 et 3721.

Manufacturier - autres ligne 26. Toutes les autres industries manufacturières non énumérées ci-dessus. CTI 101 à 399 moins 2512, 271, 295, 352, 361, 371 et 3721. Dans certains cas, cette catégorie est utilisée lorsqu'il n'y a pas de répartition des industries manufacturières particulières.

Total manufacturier ligne 27. La somme des industries manufacturières, lignes 20 à 26.

Construction ligne 29. CTI 401 à 429. Les ventes d'asphalte, au tableau E, à des fins de pavage, quel que soit l'acheteur.

Total industriel ligne 30. Le total des utilisations dans les secteurs des mines, de la fabrication, de la foresterie et de la construction, lignes 19, 27, 28 et 29.

Canadian Airlines line 32. Domestic airlines engaged in the transportation of passengers, freight, express or mail. SICs 4511 and 4512, excluding foreign airlines. Excluded are establishments engaged in providing specialty flying services such as aerial photography, surveying, air taxi, flying clubs, flying schools, recreation flying etc. which are included in line 45 "Commercial and Other Institutional". Aerial crop spraying/crop dusting are considered to be Agriculture, line 42.

Domestic Marine line 35. Ships of Canadian registry (flag) engaged in the transportation of passengers or freight including ferry operations and fishing. SICs 031 and 454. Excluded are usage by National Defense and the Canadian Coast Guard, which are included in line 44.

Pipelines line 38. Establishments primarily engaged in operating pipelines for the transport of natural gas, crude oil and petroleum products and in the distribution of natural gas. SICs 461 and 492.

Road Transport and Urban Transit line 39. Establishments engaged in the provision of local and long distance trucking, transfer, in operating interurban/urban bus and coach lines and in furnishing taxicab services. SICs 456, 457 and 458.

Transportation line 41. In this sector, lines 31 to 40, only the use of fuel by the transportation industry for transportation purposes are included. Excluded are any fuels used for activities not directly involved in transportation, eg. train stations, warehouses, airports, etc. These amounts are included in line 45. Fuels which have been purchased for use by the agriculture, commercial and public institutions sectors for transportation purposes are included in the sectors to which the fuel was sold.

Agriculture line 42. Establishments engaged in agricultural activity as well as those engaged in providing services to agriculture. Includes mushroom growers, greenhouses and nurseries. SICs 011 to 023.

Public Administration line 44. All federal, provincial and local governments primarily associated with public administration. Includes the public service, RCMP, National Defense and the Coast Guard. SICs 811 to 841.

Residential line 43. Includes all residents; homes, duplexes, apartments, apartment hotels, condominiums and farm homes.

Lignes aériennes canadiennes ligne 32. Toutes les ventes aux établissements canadiens qui s'occupent principalement du transport de passagers, de marchandises, de messagerie ou de courrier par voie aérienne. CTI 4511 et 4512, sauf les sociétés d'aviation étrangères. Ne pas inclure les ventes aux établissements qui s'occupent principalement de fournir des services aériens spéciaux comme la photographie, l'arpentage et le taxi, les aéroclubs et les écoles de pilotage, qui doivent être incluses à la ligne 45 **Commerces et autres institutions**. La pulvérisation ou le poudrage des cultures à partir d'aéronefs sont considérés comme de l'agriculture, ligne 42.

Lignes maritimes domestiques ligne 35. Navires enregistrés au Canada (battant pavillon canadien) qui s'occupent principalement du transport de passagers ou de marchandises, y compris les bacs, les traversiers et les bateaux de pêche. CTI 031 et 454. Ne pas inclure les navires utilisés par la Défense nationale et la Garde côtière canadienne qui se trouvent à la ligne 44.

Pipelines ligne 38. Les établissements qui s'occupent principalement de l'exploitation de pipelines pour le transport de gaz naturel, pétrole brut et produits pétroliers, et dans la distribution du gaz naturel. CTI 461 et 492.

Transport commercial et en commun ligne 39. Les établissements qui s'occupent principalement de la prestation d'un service de camionnage sur courtes ou longues distances, de transfert, de l'exploitation d'autobus interurbains et urbains et d'excursions, et les services de taxis. CTI 456, 457 et 458.

Transport ligne 41. Dans ce secteur, lignes 31 à 40, seule l'utilisation du carburant par l'industrie des transports à des fins de transport est incluse. Tout combustible utilisé pour des activités non liées directement au transport, comme les gares ferroviaires, les entrepôts, les aéroports, etc., est exclu. Ces quantités sont incluses à la ligne 45. Les carburants achetés pour l'agriculture, les institutions commerciales et les institutions publiques à des fins de transport sont inclus dans les secteurs pour lesquels le carburant a été vendu.

Agriculture ligne 42. Les établissements qui s'occupent de l'activité agricole ainsi que ceux qui fournissent des services à l'agriculture. Elle comprend les producteurs de champignons, les serres et les pépinières. CTI 011 à 023.

Administration publique ligne 44. Tous les gouvernements fédéral, provinciaux et locaux principalement associés à l'administration publique. Elle comprend la Fonction publique, la GRC, la Défense nationale et la Garde côtière. CTI 811 à 841.

Domestique ligne 43. Cette catégorie comprend toutes les résidences; maisons, duplex, appartements, appartements-hôtels, condominiums et maisons de ferme.

Commercial and Other Institutional line 45. Final consumers other than those listed in lines 18 to 44. This includes service industries related to mining, transportation, as well as storage and warehousing, communications and utility (excluding electricity and natural gas), wholesale and retail trade, finance and insurance, real estate and business service, education, health and social services and other service industries. SIC divisions I, J, K, L, M, O, P, Q, and R, as well as 0919, 0929, 4513, 4529, 4532, 455, 471, 481 to 484, 493 and 499.

Commerces et autres institutions ligne 45. Consommateurs finals autres que ceux énumérés aux lignes 18 à 44. Elle comprend les industries de service liées à l'extraction minière, aux transports ainsi qu'au stockage et à l'entreposage, aux communications et aux services (à l'exception de l'électricité et du gaz naturel), à la vente au détail et au commerce de gros, aux finances et à l'assurance, au secteur immobilier et aux services commerciaux, à l'éducation, à la santé et aux services sociaux et autres industries de services. Divisions I, J, K, L, M, O, P, Q et R du CTI ainsi que 0919, 0929, 4513, 4529, 4532, 455, 471, 481 à 484, 493 et 499.

Women in Canada

Two Decades of Change

Recent decades have witnessed dramatic changes in the roles women play in Canadian society. There have been considerable improvements in the social and economic situation of women in the last two decades, however, gaps continue to exist between many leading socio-economic indicators for women and men. No other publication chronicles the changing status of women more clearly than **Women in Canada**!

This 180-page portrait examines a wide range of topics in women's lives including:

- housing
- income
- family status
- health
- education
- criminal victimization
- labour force characteristics

In addition, the report presents separate sections on:

- immigrant women
- women in visible minorities
- Aboriginal women
- women with disabilities

More than just facts!

Women in Canada offers the most in-depth, accurate information available on women today. With its easy-to-read format, and over 200 charts and tables, you'll discover many essential facts about the changing status of women over the last two decades.

Being aware of the roles, status and lifestyles of Canadian women is essential for **planning and implementing appropriate social policies**, for **developing successful marketing strategies**, or for simply **gaining a better appreciation** of how Canadian society has changed.

Women in Canada (89-5030XPE, issue # 95001) is available in Canada for \$49 (plus PST & GST), US \$59 in the United States, and US \$69 in other countries.

Femmes au Canada

Deux décennies de changements profonds

Au cours des décennies récentes, les rôles que jouent les femmes dans la société ont subi des bouleversements profonds. La situation sociale et économique des femmes s'est améliorée

considérablement pendant les deux dernières décennies; cependant, il existe toujours un fossé entre les nombreux indicateurs sociaux et économiques qui s'appliquent aux hommes et aux femmes. Aucune autre publication ne retrace l'évolution des femmes aussi soigneusement que **Les femmes au Canada**.

Ce tout dernier rapport de 180 pages traite des divers aspects de la vie des femmes, notamment :

- les caractéristiques de la population active
- le revenu
- la famille
- la santé
- le logement
- l'éducation
- la victimisation

De plus, ce rapport comporte des sections distinctes:

- sur les immigrantes
- les membres de minorités visibles
- les femmes autochtones
- les femmes ayant une incapacité.

Les faits... et encore plus!

Les femmes au Canada vous fournit l'information la plus détaillée et la plus exacte qui soit sur les femmes d'aujourd'hui. Ouvrage de lecture facile, il contient plus de 200 tableaux et graphiques sur les points clés de l'évolution des femmes au cours des deux dernières décennies.

Connaître les rôles, les situations et les modes de vie des femmes canadiennes constitue un élément essentiel pour ce qui est de la planification et la mise en oeuvre des politiques sociales opportunes, l'élaboration des stratégies efficaces de marketing, et la compréhension des transformations qui ont marqué la société canadienne.

Les femmes au Canada (numéro au catalogue 89-5030XPF, numéro de l'édition 95001) est disponible au coût de 49 \$ (TPS et TVP en sus) au Canada, 59 \$ US aux États-Unis et 69 \$ US dans les autres pays.

SERVICES INDICATORS

For and About Businesses Serving the Business of Canada...

At last, current data and expert analysis on this VITAL sector in one publication!

The services sector now dominates the industrial economies of the world. Telecommunications, banking, advertising, computers, real estate, engineering and insurance represent an eclectic range of services on which all other economic sectors rely.

Despite their critical economic role, however, it has been hard to find out what's happening in these industries. Extensive and time-consuming efforts have, at best, provided a collection of diverse bits and pieces of information ... an incomplete basis for informed understanding and effective action.

Now, instead of this fragmented picture, **Services Indicators** brings you a cohesive whole. An innovative quarterly from Statistics Canada, this publication **breaks new ground**, providing **timely** updates on performance and developments in:

- Communications
- Finance, Insurance and Real Estate
- Business Services

Services Indicators brings together analytical tables, charts, graphs and commentary in a stimulating and inviting format. From a wide range of key financial indicators including profits, equity, revenues, assets and liabilities, to trends and analysis of employment, salaries and output – PLUS a probing feature article in every issue, **Services Indicators** gives you the complete picture for the first time!

Finally, anyone with a vested interest in the services economy can go to **Services Indicators** for **current** information on these industries ... both **at-a-glance** and **in more detail than has ever been available before** – all in one unique publication.

If **your** business is serving business in Canada, or if you are involved in financing, supplying, assessing or actually using these services, **Services Indicators** is a turning point – an opportunity to forge into the future armed with the most current insights and knowledge.

Order YOUR subscription to **Services Indicators** today!

Services Indicators (catalogue no. 63-0160XPB) is \$112 (plus 7% GST and applicable PST) in Canada, US\$135 in the United States and US\$157 in other countries.

To order, write to Statistics Canada, Operations and Integration Division, Circulation Management, 120 Parkdale Avenue, Ottawa, Ontario K1A 0T6 or contact the nearest Statistics Canada Regional Reference Centre listed in this publication.

If more convenient, fax your order to 1-613-951-1584 or call 1-800-267-6677 toll-free in Canada and the United States [1-613-951-7277 elsewhere] and charge to your VISA or MasterCard.

INDICATEURS DES SERVICES

Au sujet des entreprises au service des affaires du Canada et à leur intention...

Enfin regroupées en une publication, des données courantes et des analyses éclairées sur ce secteur **ESSENTIEL!**

Le secteur des services domine à l'heure actuelle les économies industrielles du monde. Les télécommunications, les opérations bancaires, la publicité, l'informatique, l'immobilier, le génie et l'assurance représentent une gamme éclectique de services sur lesquels reposent tous les autres secteurs économiques.

En dépit de leur rôle critique sur le plan économique, il est toutefois difficile de savoir ce qui se passe dans ces branches d'activité. Des efforts considérables et fastidieux ont permis, au mieux, de rassembler une collection de renseignements fragmentaires divers... qui ne favorisent pas la compréhension avisée et la prise de mesures efficaces.

Remplacez **maintenant** ce tableau fragmentaire par l'image cohérente que vous offre **Indicateurs des services**. Cette publication trimestrielle innovatrice de Statistique Canada **pénètre dans un domaine inexploré**, fournissant des aperçus **opportuns** du rendement et des progrès dans les domaines suivants :

- Communications
- Finance, assurance et immobilier
- Services aux entreprises

Indicateurs des services rassemble des tableaux analytiques, des diagrammes, des graphiques et des observations en un mode de présentation stimulant et attrayant. En puisant à même une vaste gamme d'indicateurs financiers importants, allant notamment des profits, des capitaux propres, des recettes, de l'actif et du passif aux tendances et analyses de l'emploi, des salaires et de l'extrant – à laquelle s'ajoute un article de fond exploratif dans chaque numéro, **Indicateurs des services** brosse pour la première fois un tableau complet!

Enfin, quiconque s'intéresse au secteur des services peut consulter **Indicateurs des services** pour trouver des renseignements **courants** sur ces branches d'activité... tant sous une **forme sommaire qu'à un niveau de détail n'ayant jamais encore été offert** – et ce, dans une même publication.

Si vous êtes de ceux qui fournissent des services aux entreprises canadiennes, ou si vous financez, fournissez ou évaluez ces services ou y avez en fait recours, **Indicateurs des services** représente un tournant – une chance de s'aventurer dans l'avenir en étant armé des réflexions et connaissances les plus actuelles.

Commandez dès aujourd'hui VOTRE abonnement à **Indicateurs des services!**

Indicateurs des services (n° 63-0160XPB au catalogue) coûte 112 \$ (plus 7 % de TPS et la TVP en vigueur) au Canada, 135 \$ US aux États-Unis et 157 \$ US dans les autres pays.

Pour commander, écrivez à Statistique Canada, Division des Opérations et de l'intégration, Direction de la circulation, 120, avenue Parkdale, Ottawa (Ontario) K1A 0T6, ou communiquez avec le Centre régional de consultation de Statistique Canada le plus près (voir la liste qui figure dans la présente publication).

Si vous préférez, vous pouvez télécopier votre commande en composant le 1-613-951-1584 ou téléphoner sans frais du Canada et des États-Unis au 1-800-267-6677 [ou d'ailleurs, au 1-613-951-7277] et porter les frais à votre compte VISA ou MasterCard.

Pick a topic... any topic

The **1994 Statistics Canada Catalogue** is your guide to the most complete collection of facts and figures on Canada's changing business, social and economic environment. No matter what you need to know, the **Catalogue** will point you in the right direction.

From the most popular topics of the day – like employment, income, trade, and education – to specific research studies – like mineral products shipped from Canadian ports and criminal victimization in urban areas – you'll find it all here.

... the **1994 Statistics Canada Catalogue** will help you get your bearings...

The **Catalogue** puts all this information at your fingertips. With the expanded index, you can search by subject, author or title – even periodical articles are indexed. There's also a separate index for all our electronic products.

The **Catalogue** has everything you need to access all Statistics Canada's products:

- descriptions of over 25 new titles, plus succinct abstracts of the over 650 titles and 7 map series already produced;
- a complete guide to finding and using statistics;
- electronic products in a variety of media, and

advice on getting expert assistance on electronic products and on-line searches;

● tabs to each section -- so you can immediately flip to the information you need.

... time and time again

To make sure that the **Catalogue** stands up to frequent use, we used a specially coated cover to prevent broken spines, tattered edges and dog-eared corners.

Order today – you'll be lost without it.

Choisissez un sujet... n'importe lequel

Le **Catalogue de Statistique Canada 1994** est votre guide pour la collection la plus complète de faits et de chiffres dans les domaines, en constante évolution, du commerce, de la société et de l'économie du Canada. Peu importe ce que vous voulez savoir, le **Catalogue** vous mettra sur la bonne piste.

Des sujets actuels les plus populaires – comme l'emploi, le revenu, le commerce et l'éducation – à des études de recherche spécialisées – comme les produits minéraux expédiés des ports canadiens et la victimisation dans les régions urbaines – vous trouverez tout dans ce document.

Le Catalogue de Statistique Canada 1994 vous aidera à vous orienter...

Le **Catalogue** vous met tous ces renseignements sous la main. L'index augmenté vous permet de chercher par sujet, auteur ou titre – les articles de périodiques sont même indexés. On a aussi ajouté un index séparé pour tous nos produits électroniques.

Le **Catalogue** a tout ce qu'il vous faut pour vous procurer les produits de Statistique Canada :

- descriptions de plus de 25 nouveaux titres et courts résumés des 650 titres et plus et des 7 séries de cartes déjà disponibles;
- guide complet pour obtenir et utiliser les données statistiques;
- produits électroniques sur supports divers et conseils sur l'obtention d'aide d'experts pour

les produits électroniques et les recherches en direct;

● système d'onglets pour chaque section – pour que vous puissiez immédiatement repérer les renseignements qui vous intéressent.

...maintes et maintes fois

Pour garantir que le **Catalogue** puisse résister à une utilisation fréquente, nous avons utilisé une couverture avec un revêtement spécial conçue pour éviter les dos cassés, les bords abîmés et les coins de page pliés.

Commandez aujourd'hui – vous ne pourrez plus vous en passer.

Data in Many Forms...

Statistics Canada disseminates data in a variety of forms. In addition to publications, both standard and special tabulations are offered. Data are available on the Internet, compact disc, diskette, computer printouts, microfiche and microfilm, and magnetic tape. Maps and other geographic reference materials are available for some types of data. Direct online access to aggregated information is possible through CANSIM, Statistics Canada's machine-readable database and retrieval system.

How to Obtain More Information

Inquiries about this publication and related statistics or services should be directed to: Energy Section, Industry Division, Statistics Canada, Ottawa, Ontario, K1A 0T6 (telephone (613) 951-9823) or to the Statistics Canada Regional Reference Centre in:

| | |
|-------------------------|--------------------------|

How to Order Publications

Statistics Canada publications may be purchased from local authorized agents and other community bookstores, the Statistics Canada Regional Reference Centres, or from:

Statistics Canada
Operations and Integration Division
Circulation Management
120 Parkdale Avenue
Ottawa, Ontario
K1A 0T6

Telephone: (613) 951-7277
Fax: (613) 951-1584
Toronto (credit card only): (416) 973-8018
Internet: order@statcan.ca

Standards of Service to the Public

To maintain quality service to the public, Statistics Canada follows established standards covering statistical products and services, delivery of statistical information, cost-recovered services and service to respondents. To obtain a copy of these service standards, please contact your nearest Statistics Canada Regional Reference Centre.

Des données sous plusieurs formes...

Statistique Canada diffuse les données sous formes diverses. Outre les publications, des totalisations habituelles et spéciales sont offertes. Les données sont disponibles sur internet, disque compact, disquette, imprimé d'ordinateur, microfiche et microfilm, et bande magnétique. Des cartes et d'autres documents de référence géographiques sont disponibles pour certaines sortes de données. L'accès direct à des données agrégées est possible par le truchement de CANSIM, la base de données ordinolinguage et le système d'extraction de Statistique Canada.

Comment obtenir d'autres renseignements

Toutes demandes de renseignements au sujet de la présente publication ou au sujet de statistiques ou de services connexes doit être adressée à: Section de l'énergie, Division de l'industrie, Statistique Canada, Ottawa, Ontario, K1A 0T6 (téléphone: (613) 951-9823) ou à l'un des centres de consultation régionaux de Statistique Canada:

| | |

Note of appreciation

Canada owes the success of its statistical system to a long-standing cooperation involving Statistics Canada, the citizens of Canada, its businesses, governments and other institutions. Accurate and timely statistical information could not be produced without their continued co-operation and goodwill.

Note de reconnaissance

Le succès du système statistique du Canada repose sur un partenariat bien établi entre Statistique Canada et la population, les entreprises, les administrations canadiennes et les autres organismes. Sans cette collaboration et cette bonne volonté, il serait impossible de produire des statistiques précises et actuelles.

Symbols

The following standard symbols are used in Statistics Canada publications:

- .. figures not available.
- ... figures not appropriate or not applicable.
- nil or zero.
- amount too small to be expressed.
- p preliminary figures.
- r revised figures.
- x confidential to meet secrecy requirements of the Statistics Act.
- * disposition of this secondary product is shown under the primary form thereof

Note

Data for any quarter in a calendar year may be revised and included in the cumulative tables of a subsequent quarterly issue of that year (such revisions are incorporated, by quarters, in the CANSIM data base). Given that further revisions to submitted data are received after the publication of the fourth quarter issue of any given year, it should be borne in mind that the statistical series shown in this publication are not necessarily the same in every detail as those shown in other annual publications produced by the Energy Section of Statistics Canada. These latter publications are usually published after the fourth quarter issue of this publication. From time to time revisions to previous years may be incorporated in the CANSIM data base.

Additional information

For more information, please contact Irfan Hashmi
Energy Section, Tel (613) 951-3501

The paper used in this publication meets the minimum requirements of American National Standard for Information Sciences - Permanence of Paper for Printed Library Materials, ANSI Z39.48 - 1984.

Signes conventionnels

Les signes conventionnels suivant sont employés uniformément dans les publications de Statistique Canada:

- .. nombres indisponibles.
- ... n'ayant pas lieu de figurer.
- néant ou zéro.
- nombres infimes.
- p nombres provisoires.
- r nombres rectifiés.
- x confidentiel en vertu des dispositions de la Loi sur la statistique relatives au secret.
- * la disposition de ce produit secondaire est comprise dans les données relatives à la forme primaire de ce même produit

Nota

On peut réviser et inclure les données d'un trimestre d'une année civile dans les tableaux cumulatifs d'un numéro ultérieur de cette même année, ces révisions sont incluses, par trimestre, dans la base de données de CANSIM. Comme d'autres révisions aux données soumises sont reçues après la publication numéro du quatrième trimestre d'une année donnée, il faut se rappeler que les séries statistiques figurant dans cette publication ne sont pas nécessairement les mêmes à tous les égards que celles présentées dans les publications annuelles produites par la Section de l'énergie de Statistique Canada. Ces dernières publications paraissent ordinairement après le numéro du quatrième trimestre de la présente publication. De temps à autre, des révisions pour des années précédentes peuvent être incluses dans la base de données de CANSIM.

Information supplémentaire

Pour tout renseignement supplémentaire, veuillez communiquer avec Manon Prévost, Section de l'énergie, tél (613) 951-5370

Le papier utilisé dans la présente publication répond aux exigences minimales de l'«American National Standard for Information Sciences» - «Permanence of Paper for Printed Library Materials», ANSI Z39.48 - 1984.

Acknowledgement:

The Industrial Consumption of Energy Survey was expanded in 1994 to improve the quality of the energy use data contained in this report and provide greater industry detail than previously available. Natural Resources Canada has provided the funding for the expansion of the survey. Space limitations preclude us from providing the full range of data in this report. If you are interested in detailed energy use tabulations for major energy industries, contact Serge Grenier at (613) 951-3566.

Remerciements:

L'Enquête sur la consommation industrielle d'énergie a connu une expansion d'échantillon en 1994 pour améliorer la qualité des données sur l'utilisation de l'énergie incluses dans ce rapport et fournir plus de détails au niveau industriel que ce qui était disponible auparavant. Ressources Naturelles Canada a fourni le financement pour l'expansion de l'enquête. Le manque d'espace nous empêche de fournir toutes les données disponibles dans ce rapport. Si vous désirez avoir des tableaux détaillés sur l'utilisation d'énergie pour consommatrices d'énergie veuillez communiquer avec Serge Grenier au (613) 951-3566.

Highlights

Energy Supply and Demand

Fourth Quarter 1995

Canadian production of energy products increased by 4.0% in 1995, the lowest rate in three years. Slower export growth and only modest increases in domestic energy consumption ended the recent surge in energy production. Exports increased by 8.2%, down from 11.0% the previous year, while domestic consumption rose by 2.4%, the smallest increase since 1992.

In recent years, booming exports of natural gas and crude oil have been pushing Canadian energy production higher. All natural gas and most of the crude oil exports go to the United States, via an extensive system of pipelines. Soaring gas and oil exports have spurred the expansion of oil pipelines but have also kept existing natural gas pipelines operating near full capacity. Two major factors are behind strong demand for natural gas in the US: growing demand by electric utilities and industrial users, and the lower cost of Canadian natural gas. With the slow-down in Canadian natural gas exports, US natural gas users turned to inventories to help meet their needs. Growth in crude oil exports slowed in 1995 as did coal exports, while electricity exports actually declined compared with 1994.

Final demand

Energy consumption in Canada was 2.4% higher than in 1994. Most of the increase in energy demand was due to higher energy consumption in the industrial sector. Residential energy consumption declined 1.8%, due to unusually mild weather in the first half of 1995, dramatically reducing demand for heating fuels.

Industrial energy demand continued to recover from its trough in 1991-1992, increasing by a robust 3.8% in 1995. This was the largest increase in seven years and the first time industrial energy use has surpassed the pre-recessions peak, set in 1989. A jump in mining energy use and strong growth in manufacturing industries, especially cement, iron and steel, and other manufacturing industries were largely responsible for the increase in industrial energy consumption.

Faits saillants

Disponibilité et écoulement d'énergie

Quatrième trimestre de 1995

Au Canada, la production d'énergie n'a progressé que de 4,0% en 1995, ce qui en fait le taux d'augmentation le plus faible en trois ans. Une croissance plus lente des exportations et une augmentation modeste de la consommation d'énergie au pays ont mis un terme à la hausse qu'avait connue récemment la production. Ainsi, les exportations ne se sont relevées que de 8,2%, comparativement à 11,0% l'année antérieure, tandis que la demande intérieure n'a progressé que de 2,4%, la plus petite augmentation depuis 1992.

L'escalade des exportations de gaz naturel et de pétrole brut est à l'origine de l'ascension de la production d'énergie observée au Canada ces dernières années. La totalité du gaz naturel et la majorité du pétrole brut d'exportation sont acheminés aux États-Unis, grâce à un vaste réseau de canalisations (pipelines). La progression exceptionnelle des exportations de gaz naturel et de pétrole brut a non seulement suscité la construction de nouveaux canalisations de pétrole, mais aussi maintenu l'exploitation des canalisations de gaz naturel existants presque à capacité. Il y a deux grandes explications à la forte demande de gaz naturel aux États-Unes: le relèvement de la demande des compagnies d'électricité et des utilisateurs industriels, et le prix plus faible du gaz naturel canadien. Devant l'affaiblissement des exportations canadiennes, les acheteurs américains se sont tournés vers leurs réserves de gaz naturel pour subvenir à leurs besoins. La croissance des exportations de charbon, tandis que celles d'électricité ont perdu du terrain comparativement aux chiffres de 1994.

Écoulement d'énergie

Au Canada, la consommation d'énergie s'est accrue de 2,4% par rapport à 1994. On attribue principalement cette hausse à une consommation accrue dans le secteur industriel. Dans le secteur résidentiel, par contre, la consommation d'énergie a fléchi de 1,8% en raison du temps anormalement clément observé au cours du premier semestre de 1995, qui a eu un effet à la baisse considérable sur les achats de combustibles destinés au chauffage.

La demande industrielle d'énergie a continué de prendre du mieux consécutivement au creux qu'elle avait atteint en 1991-1992, grâce à un solide gain de 3,8% en 1995. Il s'agit de la hausse la plus importante enregistrée en sept ans et, pour la première fois, la consommation d'énergie du secteur industriel a dépassé le sommet qu'elle avait atteint en 1989, avant la récession. On doit essentiellement le relèvement de la demande industrielle d'énergie au bond observé dans le secteur minier et à la solide croissance notée dans les industries manufacturières, en particulier les cimenteries, la sidérurgie et d'autres industries du même secteur.

Over the past decade energy production in Canada has risen by almost 50%, mainly as a result of strong export demand. Since 1985, final demand for energy in Canada has increased by 17%, roughly in tandem with population growth. Energy consumption by the manufacturing sector rose by less than 6%, even though manufacturing output jumped by 18%, indicating this sector is becoming more energy efficient. On a per capita basis, manufacturing energy consumption has been steadily declining in Canada, despite the energy intensive industrial structure. The largest increases in Canadian energy consumption have come from transportation residential, and commercial energy use.

La production d'énergie a presque augmenté de 50% au Canada durant la dernière décennie, surtout à cause de la forte demande à l'exportation. Ainsi, depuis 1985, l'écoulement d'énergie a progressé de 17% au Canada, imitant en cela la croissance démographique. Bien que la production ait bondi de 18% dans le secteur de la fabrication, la consommation d'énergie, elle, n'a gagné que 6%. Il faut en conclure que l'autonomie énergétique du secteur a grandi. La demande d'énergie par habitant du secteur de la fabrication n'a cessé de diminuer, en dépit de la structure énergivore du secteur. Au Canada, les plus hausses de la consommation d'énergie ont été enregistrées au niveau du transport, du commerce et du secteur résidentiel.

Supply and Demand of Energy
Disponibilité et écoulement d'énergie au Canada

| | 1995 | 1994 | 1994 to 1995 1994 à 1995 |
|--|---------------|---------------|-----------------------------|
| | petajoules | | % change - en % |
| Production - Production | 14 493 | 13 941 | 4.0 |
| Exports - Exportations | 7 438 | 6 877 | 8.2 |
| Imports - Importations | 2 030 | 2 045 | -0.7 |
| Availability - Disponibilité | 9 533 | 9 360 | 1.8 |
| Non-energy use - Usage non énergétique | 727 | 745 | -2.4 |
| Demand - Écoulement | 6 860 | 6 697 | 2.4 |
| Industrial - Industriel | 2 165 | 2 086 | 3.8 |
| Transportation - Transport | 2 073 | 2 027 | 2.3 |
| Residential & farm - Domestique et ferme | 1 461 | 1 472 | -0.7 |
| Government & commercial - Gouvernement et commercial | 1 161 | 1 112 | 4.4 |

Note: A 30 litre gasoline fill-up contains about one gigajoule of energy. A petajoule is one million gigajoules.

Note: Un plein d'essence de 30 litres contient environ un gigajoule d'énergie. Un pétajoule est égal à un million de gigajoules.

DATA QUALITY AND METHODOLOGY

The data contained in this publication are derived primarily from monthly and quarterly surveys and administrative records received by Statistics Canada (STC), supplemented with data from the National Energy Board and the various energy producing provinces. In general, supply data (production, inventories, trade, etc.) are taken from monthly STC energy publications and disposition data as reported by the larger energy supply companies on quarterly questionnaires. The companies surveyed are the producers and large distributors of petroleum products, major electric utilities (some of which consolidate information from smaller utilities which they supply), industrial electricity producers, coal mines and the natural gas utility industry. Disposition data are supplemented by data obtained from a quarterly survey of the larger industrial energy consumers.

The validity of the published data is partly dependant on the ability of the responding industries to code customers in an accurate manner. However, many reporting companies, especially in the petroleum products area, have difficulty in determining the final consumers of the product, due to the presence of marketing agents, brokers, etc. Further, the final consumer may use the purchased product in a number of different industries; eg. an iron ore company which extracts and mills ore can also operate a railway system; or a company which operates cement plants can also have ready mix concrete plants, and a trucking fleet all under the same name; companies which have misleading names, which refer to an activity not carried out by the firm or who have changed their activity and not their name.

The universes for all surveys forming the basis of this publication are characterized by very few but very large respondents - Westcoast Energy, Dow Chemicals, Petro Canada, etc. In general no "sample" surveys of the energy producing and/or distribution industries are employed, rather surveys of the total universe form the basis of this publication. Selected energy forms used in the most energy intensive industries of the industrial sector and by electric utilities are monitored by surveying the largest establishment to verify selected data reported by the supply industries. In instances where annual data is available from other STC surveys, comparisons are made to ensure comparability. Those few areas where estimates have played a role are indicated in the section Notes on Individual Tables following.

QUALITÉ DES DONNÉES ET MÉTHODOLOGIE

Les données présentées ici sont établies principalement à partir d'enquêtes mensuelles et trimestrielles sur l'énergie et de dossiers administratifs de Statistique Canada (SC), que viennent compléter des données communiquées de l'Office national de l'énergie et des différentes provinces productrices d'énergie. En général, les données ayant trait à l'approvisionnement (production, stocks, commerce, etc.) proviennent des publications mensuelles sur l'énergie de SC et elles sont celles que les grandes compagnies déclarent sur les questionnaires trimestriels. Les entreprises enquêtées sont les producteurs et les principaux distributeurs de produits pétroliers, les grandes compagnies d'électricité (dont certaines consolident les renseignements provenant de services publics moins importants qu'elles fournissent), les producteurs industriels d'électricité, les mines de charbon et les compagnies de gaz naturel. Les données sur la disposition sont complémentées par des estimations obtenues d'une enquête trimestrielle auprès des industries à forte consommation d'énergie.

La validité des données publiées dépend en partie de la capacité des unités répondantes de coder les clients de façon appropriée. Cependant, bien des compagnies répondantes, surtout celles du secteur des produits pétroliers éprouvent des difficultés à déterminer les consommateurs finaux du produit en raison de la présence d'agents de commercialisation, de courtiers, etc., De plus, le consommateur final peut utiliser le produit qu'il achète dans plusieurs industries différentes. Quelques exemples: la compagnie qui s'occupe d'extraire et de broier du minerai de fer et qui exploite aussi un système ferroviaire; celle qui exploite des cimenteries et, sous la même raison sociale, des usines de béton prêt à l'emploi et un parc de camions; celle dont le nom peut induire en erreur en désignant une activité qu'elle n'exerce pas; ou celle qui a modifié son activité, mais pas sa raison sociale.

Les univers des enquêtes ayant servi à préparer la publication se caractérisent par un nombre peu élevé de répondants, mais non des moindres, tels que Westcoast Energy, Dow Chemicals et Petro Canada. En général, on n'utilise pas d'enquêtes par sondage des industries productrices et/ou distributrices d'énergie. Pour les fins de la publication, on a plutôt recours au recensement de l'univers total. Lorsqu'il s'agit de certaines utilisations de l'énergie par les branches du secteur ayant la plus forte intensité énergétique et par les compagnies d'électricité, on procède par enquête auprès des principaux établissements pour vérifier des données déclarées par les branches fournisseuses. Si les données annuelles peuvent être obtenues d'autres enquêtes de SC, on se livre à des comparaisons pour en assurer la comparabilité. La section appelée les **notes sur les tableaux** des données indique les quelques domaines pour lesquels ont servi les estimations.

Units of Measure

kilo = 10^3
mega = 10^6
giga = 10^9
tera = 10^{12}
peta = 10^{15}

Energy conversion factors utilized, based on the gross heat of combustion, are as follows:

Unités de mesure

kilo = 10^3
méga = 10^6
giga = 10^9
tera = 10^{12}
peta = 10^{15}

Les facteurs de conversion en terajoules calculés selon la chaleur brute de combustion sont les suivantes:

| Fuel type - Combustible | Natural unit - Unité naturelle | Conversion factor Coefficient de conversion |

- 1 Conversion factors revised for 1989. - Facteur révisé en 1989.
- 2 Not used in calculations in this publication. - Pas employé dans les calculs de cette publication.
- 3 Still gas is expressed in cubic metres of heavy fuel oil equivalent. - Le gaz de distillation s'exprime en équivalent de mètre cube de mazout lourd.
- 4 Revised from year to year. - Révisé annuellement.

ADDITIONAL INFORMATION - INFORMATION SUPPLÉMENTAIRE

gallon = Canadian or Imperial gallon - gallon canadien ou gallon impérial
barrel - baril = Canadian barrel - baril canadien
tonne = metric tonne - tonne métrique
m³ = cubic metre - mètre cube

KJ = kilojoule MJ = megajoule - mégajoule
GJ = gigajoule TJ = terajoule
PJ = petajoule

1000 joules = 0.948 213 BTU's; (1 BTU = 1 054.615 joules)

1 litre = 0.219 97 gallon; (4.546 09 litres = 1 gallon)
= 0.264 17 U.S. gallon - gallon E.U.

1 barrel - baril = 0.158 987 m³ = 158.987 litres
= 34.972 gallons = 42 gallons U.S. - gallons E.U.

1 m³ = 1 000 litres = 219.969 gallons = 6.293 barrels - barils
= 35.314 7 cubic feet - pieds cubes; (0.0283 28 m³ = 1 foot³ - pieds³)
= 264.172 U.S. gallons - gallons E.U.

1 kilogram - kilogramme = 2.204 62 pounds - livres; (0.453 592 kg = 1 pound - livre)

1 tonne = 1 000 kg = 1.102 31 (short) tons - tonne impériale
= 2 204.62 pounds - livres = 0.984 207 long ton - tonne britannique

162.3 barrels crude - barils de pétrole brut = 1 terajoule (TJ)

1 barrel crude - baril de pétrole brut = 6.159 gigajoule (GJ)

BTU/barrel to TJ/m³ = ((BTU/1000) * 6.636 7)

Approximate product weights - Le poids approximatif des produits

| | | |
|---|--------------------|------------|
| L.P.G.'s - GPL | 1 m ³ = | 507.5 kg |
| Still gas - Gas de distillation | 1 m ³ = | 468.7 kg |
| Aviation gasoline - Essence d'aviation | 1 m ³ = | 704.4 kg |
| Motor gasoline - Essence à moteur | 1 m ³ = | 745.2 kg |
| Aviation turbo fuel - Carburéacteurs pour turbine à gaz | 1 m ³ = | 807.4 kg |
| Kerosene - Kérosène | 1 m ³ = | 807.4 kg |
| Diesel - Huiles diésels | 1 m ³ = | 839.5 kg |
| Light fuel oil - Mazouts légers | 1 m ³ = | 839.5 kg |
| Heavy fuel oil - Mazouts lourds | 1 m ³ = | 992.8 kg |
| Asphalt - Asphalte | 1 m ³ = | 999.7 kg |
| Petroleum coke - Coke de pétrole | 1 m ³ = | 1 199.3 kg |
| Oils and greases - Huiles et graisses lubrifiantes | 1 m ³ = | 938.9 kg |

Notes on Individual Tables

Please use these notes in conjunction with the definitions presented following the tables.

Table S - Historical Energy Summary Table - Canada

Presents historical energy trends at the national level for selected items of measurement.

Degree Days Below 18 degrees Celsius or Heating Degree Days are used to monitor space heating requirements. Data are calculated by Environment Canada and measure the extent to which the outdoor mean temperature (the average of the maximum and minimum) falls below 18 degrees for each calendar day. The provincial and national figures have been developed by utilizing data for major population centres in each province.

Table S1 - Energy Summary Table

Allows the analysis of energy trends at the provincial level for items presented in Table S.

Tables A and B - Primary and Secondary Energy

These tables summarize data on primary and secondary energy forms. Energy products with both primary and secondary sources (steam, electricity and LPGs) have all their disposition accounted for under the primary energy form.

Coal (column 1). Data presented here are a summation of that presented in Table F. It should be noted that the heat content varies depending on the mine. For publication purposes, provincial heat contents have been established for each type of coal. Therefore, interprovincial movements, expressed in terajoules, may not balance at the Canada level.

The monthly publication **Coal and Coke Statistics**, Catalogue 26-002, is the source of the data for coal and coke, column 8. Coke oven gas, column 9, is derived from applying a factor of 0.227 against the amount of coal charged to coke ovens. This factor is based on information received from producers of coke.

Notes sur les tableaux

Veuillez vous servir de ces notes avec les définitions présentées après les tableaux.

Tableau S - Tableau chronologique sommaire de l'énergie - Canada

Présente les tendances historiques en matière d'énergie au niveau national pour certains postes servant de points de repère.

On utilise les **degrés-jours** au-dessous de 18 degrés C ou **degrés-jours de chauffage** pour vérifier les besoins en chauffage ambiant. Les données sont calculées par Environnement Canada et mesurent à quel point la température extérieure moyenne (la moyenne du maximum et du minimum) se situe au-dessous de 18 degrés C pour chaque jour de l'année. Les chiffres pour le Canada et les provinces ont été calculés à partir des données des principaux centres de population dans chaque province.

Tableau S1 - Tableau sommaire de l'énergie

Permet l'analyse des tendances énergétiques au niveau provincial pour les postes du tableau S.

Tableaux A et B - Énergie primaire et secondaire

Ces tableaux résument les données sur les formes d'énergie primaire et secondaire. Les produits énergétiques consommés provenant de sources primaires et secondaires (vapeur, électricité et GPL) figurent intégralement comme forme primaire de chacune.

Charbon (colonne 1). Les données présentées sont le résultat de la sommation des données du tableau F. Il faut remarquer que la teneur en chaleur varie selon la mine. Pour des fins de publication, les teneurs provinciales ont été établies pour chaque type de charbon. Les mouvements interprovinciaux, exprimés en térajoules, peuvent ne pas correspondre au total canadien.

La publication mensuelle **Statistiques sur le charbon et le coke**, catalogue 26-002, est la source des données pour le charbon et le coke, colonne 8. Les chiffres pour les gaz de four à coke, colonne 9, sont obtenus en multipliant par un facteur de 0,227 la quantité de charbon introduite dans les fours à cokerie. Ce facteur est basé sur l'information fournie par les producteurs de coke.

Crude Oil (column 2). Includes pentanes plus, condensate, crude bitumen and synthetic crude as well as conventional crude. Small amounts of crude are estimated and added to crude oil production in Alberta to cover the use of petroleum fuels used at the synthetic oil plants, which are not included in the production as reported by the Alberta Energy Conservation Board (AERCB). Starting in 1990, the enrichment of synthetic crude at the oil sands plants by the addition of hydrogen, which originates from natural gas, is included as an interproduct transfer. (See table 20.)

For reasons of confidentiality, imports of crude oil have been excluded from the tables relating to the individual Atlantic provinces. Similarly, all subsequent data points also exclude crude imports. However, Table 2, **Atlantic Provinces** does show imports into the region as a whole.

Inventory data used to calculate stock variation (line 5) are based on pipeline inventories (which are source province of origin and not the province in which they are held) and refinery inventories. The net effect of this method of calculating is to overstate some provinces and understate others. At the Canada level, however, these differences counter balance.

Any use of crude oil by sectors other than petroleum refineries is included in **other adjustments**, line 7.

The monthly publications **Refined Petroleum Products (RPP)** Catalogue 45-004, and **Crude Oil and Natural Gas Production**, Catalogue 26-006, plus data obtained from the Alberta Energy Conservation Board (AERCB) and administrative records are the sources of the data used to compile crude oil.

Natural Gas (column 3). A modified production is used in this publication instead of marketable production. This modified production is equal to marketable production plus reinjection and shrinkage, with the difference between the two shown as producer consumption. Production and producers consumption are modified to account for the amount of hydrocarbon gas produced and used as fuel in the oilsands/non-conventional sector of the oil and gas industry. As a result, production and producers consumption will not agree with data published in **Crude Oil and Natural Gas Production**. (See table 20.)

Pétrole brut (colonne 2). Représente le pétrole brut classique ainsi que les pentanes plus, les condensats, le pétrole bitumineux et le pétrole synthétique. De faibles quantités de brut sont évaluées et ajoutées à la production de pétrole brut de l'Alberta pour couvrir l'utilisation de combustibles de pétrole utilisés dans les usines de pétrole synthétique, qui ne sont pas inclus dans la production signalée par l'Alberta Energy Conservation Board (AERCB). En 1990, l'hydrogène extrait du gaz naturel pour être ensuite introduit dans le pétrole brut synthétique aux installations de traitement des sables bitumineux est représenté comme un transfert inter-produit. (Voir tableau 20).

Pour des raisons de confidentialité, les importations de pétrole brut ont été exclues des tableaux en ce qui a trait à chacune des provinces de l'Atlantique. Parallèlement, toutes les données subséquentes excluent également les importations de pétrole brut. Cependant, le tableau 2, **Provinces de l'Atlantique**, n'indique pas d'importations dans l'ensemble de cette région.

Les données d'inventaire utilisées pour calculer la variation des stocks (ligne 5) sont basées sur les inventaires de pipeline (qui sont donnés pour la province d'origine et non la province dans laquelle ces inventaires sont retenus) et les inventaires de raffinerie. Cette méthode de calcul a pour effet net de surévaluer certaines provinces et d'en sous-évaluer d'autres. Ces différences s'annulent cependant au niveau national.

Toute utilisation de pétrole brut par les secteurs autres que les raffineries de pétrole est incluse dans **Autres ajustements**, ligne 7.

Les publications **Produits pétroliers raffinés (PPR)**, catalogue 45-004, et **Production de pétrole brut et de gaz naturel**, catalogue 26-006, et les données provenant de l'Alberta Energy Conservation Board (AERCB) et des registres administratifs sont les sources des données utilisées pour la compilation des chiffres sur le pétrole brut.

Gaz naturel (colonne 3). Cette publication montre une production modifiée au lieu de la production de gaz marchand. Cette production modifiée est égale à la production marchand plus les quantités injectées et les pertes au cours du traitement, la différence entre les deux se trouvant à la rubrique autoconsommation. La production et la consommation des producteurs sont modifiées pour tenir compte de la quantité de gaz d'hydrocarbures produite et utilisée comme combustible dans le secteur non conventionnel des sables bitumineux de l'industrie du pétrole et du gaz. La production et la consommation des producteurs ne correspondent donc pas aux données publiées dans **Production de pétrole brut et de gaz naturel**. (Voir tableau 20).

Starting with 1990, natural gas used to produce hydrogen for the enrichment of synthetic crude oil or oil products produced by petroleum refineries is shown as an inter-product transfer.

Estimates for the non-energy use of natural gas have been derived from the monthly production of anhydrous ammonia, methanol and carbon black by plants which use natural gas as a feedstock in their processes. The estimates take into account that only certain companies producing the products listed above use natural gas as a feedstock. Gas used as fuel associated with feedstock gas is shown under "Chemicals". This usage can only be shown for the provinces where the data are not confidential (Canada is the sum of the published numbers only). In instances where the data is confidential, the feedstock is combined with the amounts used as fuel and shown under "Chemicals".

Natural Gas conversion factors are subject to fluctuations due to the varying heat content of the gas produced from different fields and to the processes to which the gas is subjected. Conversion factors are based on the heat content of natural gas as published in **Gas Utilities**, Catalogue 55-002. The factors are normally revised for the fourth quarter of a given year, resulting in revisions to the natural gas terajoule data for the first three quarters of the year.

The monthly publication **Gas Utilities**, Catalogue 55-002, and a Quarterly End Use Survey of **Gas Utilities** are the basic sources of data for Natural Gas.

Gas Plant NGLs (Natural Gas Liquids) (column 4). Includes propane, butane and ethane. Data shown here is a summation of data presented in Table B, column 1, and Table 14. Condensate produced by gas plants is included with crude oil, column 2. For the split of the products, see Table 16. Disposition shown is for both refinery produced propane and butane and for gas plant NGLs. See notes on Table 16 for the sources.

Primary Electricity (column 5). Production is for hydro and nuclear generated electricity. The assumption is made that international and interprovincial movements of electricity are from primary sources. As virtually all generation is supplied to a grid system, it is not possible to determine the dispositions of primary or secondary electricity. Disposition data for both primary and secondary electricity (columns 11) is presented here. Generation of nuclear electricity is given in Table 18.

A partir de 1990, le gaz naturel utilisé pour produire l'hydrogène pour l'enrichissement du pétrole brut synthétique ou des produits pétroliers par les raffineries de pétrole sont présentés comme un transfert inter-produit.

On a estimé des utilisations non énergétiques du gaz naturel à partir de statistiques mensuelles sur la production d'ammoniaque anhydre, de méthanol et de carbone par les usines dont la charge d'alimentation est le gaz naturel. Ces estimations tiennent compte du fait que seules certaines des entreprises fabriquant les produits énumérés utilisent le gaz naturel comme charge d'alimentation. Le gaz utilisé comme combustible avec un gaz d'alimentation figure sous la rubrique **produits chimiques**. Cet usage ne peut être indiqué que pour les provinces où les données ne sont pas confidentielles (le Canada est la somme des chiffres publiés seulement). Dans les cas où les données sont confidentielles, la charge d'alimentation est combinée aux quantités utilisées comme combustibles et indiquée à la rubrique **Produits chimiques**.

Les facteurs de conversion utilisés pour le gaz naturel sont sujets à des fluctuations en raison de la variation de l'enthalpie du gaz produit dans les différents secteurs et des procédés auxquels il est soumis. Les facteurs de conversion sont basés sur l'enthalpie du gaz naturel publiée dans **Services de gaz**, catalogue 55-002. Les facteurs sont normalement révisés pour le quatrième trimestre d'une année donnée, entraînant la révision des données sur la quantité de térajoules du gaz naturel pour les trois premiers trimestres de l'année.

Les principales sources de données pour le gaz naturel sont la publication mensuelle **Services de gaz**, catalogue 55-002, et le Quarterly End Use Survey of **Gas Utilities**.

LGN (liquides de gaz naturel) des usines de gaz (colonne 4). Comprend le propane, le butane et l'éthane. Les données présentées ici sont la somme des données présentées au tableau B, colonne 1, et au tableau 16. Le condensat produit par les usines de gaz figure à la rubrique du pétrole brut, colonne 2. Voir tableau 14 pour une ventilation de ces produits. L'écoulement donne à la fois le propane et le butane produits par les raffineries et les LGN des usines de gaz. Voir les notes au bas du tableau 16 pour les sources.

Électricité primaire (colonne 5). La production représente l'hydroélectricité et l'électricité nucléaire. On présume que la majorité des mouvements interprovinciaux et internationaux de l'énergie électrique proviennent de sources primaires. Étant donné que presque toute la production est fournie à un réseau de distribution, il n'est pas possible de connaître les proportions d'électricité primaire ou secondaire. La colonne 11 présente à la fois les données sur l'électricité primaire et secondaire. La production d'électricité nucléaire est donnée au tableau 18.

A Quarterly Survey of Supply and Disposition of Electricity is the source of data for both this publication and **Electric Power Statistics, Volume II**, catalogue 57-202.

Steam 'sold' (column 6). Steam sold includes only known steam sales of large producers and therefore excludes any steam produced for own consumption as process steam or space heating. Primary production is from nuclear produced steam only. Biomass and geothermal produced steam sales will also be included as they come on stream.

In the natural units section of the table, secondary steam production differs from other energy forms in that it is shown under transferred from other fuels, steam generation (line 13) as a negative number (negative in order that the column will remain additive). In the terajoule section of the table, where the columns as well as the rows must be additive, the production is not shown in line 13, but rather added to primary steam and shown in line 14. This latter approach is followed to enable the summation across the columns. It is noted that production and availability of secondary steam should be indicated on the second page of the table, but due to space limitations is not included.

Secondary steam generation can be the product of dedicated steam plants or the result of co-generation of electricity and steam. For the dedicated plants the amount of fuels used are known, whereas for co-generation plants only an estimate of the fuels used for steam generation may be made.

Total primary (column 7). This is the summation of the supply of the various primary energy forms in terajoules. The values shown do not include any secondary steam. Sum of columns 1 to 6 inclusive.

Coke (column 8). See the note on Coal. The input coal for the coke plants is shown in the coal column line 11.

Coke Oven Gas (column 9). See the note on Coal. The production of coke oven gas is estimated from known coal coke production data. The thermal value of coal charged to coke ovens less the thermal value of the resultant coke production must equal the coke oven gas production, together with an allowance for heating and losses.

La publication **Électricité, disponibilité et écoulement**, trimestriel est la source des données à la fois pour la présente publication et les **Statistiques sur l'énergie électrique, volume II**, catalogue 57-202.

Vapeur vendue (colonne 6). Les ventes comprennent uniquement les ventes connues des grands producteurs et excluent par conséquent la vapeur produite pour consommation propre pour servir de vapeur de procédé ou chauffer les locaux. La production primaire indiquée est celle provenant de source nucléaire seulement. Les ventes de vapeur produite par la biomasse et les processus géothermiques seront également incluses lorsqu'elles deviendront suffisamment importantes.

Dans la partie du tableau exprimée en unités naturelles, la production secondaire est présentée sous la rubrique production de vapeur, à partir d'autres combustibles (ligne 13) comme une inscription négative (négative afin que la colonne puisse être additionnée). Dans la partie du tableau exprimée en térajoules, là où les colonnes ainsi que les rangées doivent s'additionner, la production n'est pas présentée à la ligne 13, mais plutôt ajoutée à la vapeur primaire et ainsi présentée à la ligne 14. Cette façon de procéder permet la sommation des diverses composantes de la colonne. À remarquer que la production et la disponibilité de vapeur de source secondaire doivent être indiquées à la seconde page du tableau mais qu'elles n'ont pas été incluses en raison du manque d'espace.

La production secondaire de vapeur peut être le produit d'usines dédiées à la production de vapeur ou le résultat de coproduction d'électricité et de vapeur. En ce qui a trait aux premières, on connaît les quantités de combustibles utilisées, alors que pour les usines de coproduction, on ne peut calculer qu'une approximation des combustibles utilisés pour produire de la vapeur.

Total primaire (colonne 7). C'est la somme de l'offre des diverses formes d'énergie primaire en térajoules. Les chiffres indiqués n'incluent aucune vapeur secondaire. Somme des colonnes 1 à 6 inclusivement.

Coke (colonne 8). Voir la note sur le charbon. L'approvisionnement en charbon des usines de coke est indiqué à la ligne 11 de la colonne du charbon.

Gaz de fours à coke (colonne 9). Voir la note sur le charbon. Les chiffres sur la production de gaz de fours à coke sont estimés à partir des données connues sur la production de coke de houille. La valeur thermique de la houille chargée dans les fours à coke, moins la valeur thermique du coke ainsi produit, doit être égale à la production de gaz de fours à coke, rectifiée pour tenir compte de la chaleur et des pertes.

Petroleum Products (column 10). For the summation of both primary and secondary items, this column is repeated here. See column 12 of **Tables C and D** following.

Secondary Electricity (column 11). This column presents the amount of electricity generated from thermal generation. The fuels used are shown in rows 9 and 10, and may include some fuel used for co-generation, for which adequate data is not available to enable the split of the fuels.

A breakdown of the amounts of thermal electricity generated from the various types of fuels is presented in Table 17. The sources of the data are as indicated for primary electricity, column 5. Disposition data is shown under primary electricity. Exports, imports, producers consumption (which includes line losses) is included under primary electricity.

The usage of heavy fuel oil, coal and natural gas for generation by utilities is as reported on either monthly or quarterly surveys. Natural gas usage however may be overstated in that the total usage of the electric utility, including that gas used for space heating, is measured. Estimates of diesel and light fuel oil consumption use known generation for the quarter, with the amounts of these fuels used being based on the previous year's reported consumption pattern.

Alberta bituminous coal used for electrical generation has a lower heat content than the bituminous coal produced for export. Given the dominance of the export market, the heat content used is that of coal produced for such shipments.

Estimates of fuels used and efficiencies for industrial generation are based on the establishment's annual report for the previous year.

For industrial establishments generating electricity with process steam, the energy required to produce the initial steam is excluded from estimates of fuels used in the generation of electricity. Only that energy

Produits pétroliers (colonne 10). Cette colonne est répétée pour présenter le résultat de la sommation des postes primaires et secondaires. Voir colonne 12 des **tableaux C et D** qui suivent.

Électricité secondaire (colonne 11). Cette colonne présente la quantité d'électricité produite par les centrales thermiques. Les combustibles utilisés sont présentés aux colonnes 9 et 10, et peuvent comprendre une certaine quantité de combustibles utilisés pour la cogénération, pour laquelle il n'existe pas de données adéquates pour répartir les combustibles.

Le tableau 17 donne une ventilation des quantités d'électricité thermique produites à partir des divers types de combustibles. Les sources de données sont les mêmes que pour l'électricité primaire, colonne 5. Les données sur l'écoulement sont indiquées à la rubrique de l'électricité primaire. Les exportations, les importations, l'autoconsommation (qui comprend les pertes) sont également incluses dans cette rubrique.

L'utilisation de mazout lourd, de charbon et de gaz naturel pour la production d'électricité par les compagnies de services est celle signalée dans les enquêtes mensuelles ou trimestrielles. L'utilisation du gaz naturel est probablement surévaluée étant donné que cette rubrique mesure la quantité totale de gaz utilisée par les compagnies d'électricité, y compris le gaz utilisé pour le chauffage des locaux. Les estimations de la consommation de diesel et mazout légère fait appel à la production connue pour le trimestre, qui correspond aux quantités de combustibles utilisées basées sur la consommation signalée de l'année précédente.

Le charbon bitumineux de l'Alberta, utilisé pour la production d'électricité, a une teneur en chaleur inférieure à celle du charbon bitumineux produit pour l'exportation. Étant donné l'importance du marché de l'importation, la teneur en chaleur utilisée est celle du charbon produit pour ces expéditions.

Les estimations des combustibles utilisés pour la production industrielle et de leur rendement sont basées sur le rapport annuel de l'année précédente de chaque installation.

Dans le cas des établissements industriels produisant de l'électricité à l'aide de la vapeur de procédé, l'énergie requise pour produire la vapeur initiale est exclue des estimations des combustibles utilisés dans

needed to super-heat the steam for use in the turbine/generator is considered in these estimates. As a consequence efficiencies of 65% to 70% result. This contrasts to the generation by electric utilities, where all heat losses are ascribed to electricity generation, resulting in efficiencies ranging between 30% and 40% for most operations.

For most gas turbine and internal combustion generation, reported efficiencies will be in the range of 20 to 35% for both utilities and industry. However, some newer gas turbine have efficiencies of between 70 and 80%

Total Primary and Secondary (column 12). This is the summation of the various primary and secondary energy sources, columns 1 to 11. Values for production and availability are not shown as these would lead to double-counting of fuels which are both a primary energy form and used to produce a secondary energy form.

Tables C and D - Refined Petroleum Products

Due to confidentiality requirements, data for the Northwest Territories and Saskatchewan for selected crude oil items and for the production of refined petroleum products (RPP) are no longer being published. Although the combined RPP data are not being published in this publication, they are available in the RPP publication.

The item "other adjustments", line 7, is the combination of various RPP items, and is composed as follows:

- + receipts from reporting companies
- + receipts from non-reporting companies
- deliveries to reporting companies
- losses and adjustments
- transfers to feedstock

A comparison of refinery inputs (line 12, Tables A & B) against the production of refinery petroleum products, Tables B and C, line 1, presents an inflated volumetric gain in the refinery process. This inflated gain results to an extent from the partially refined products used as input in the refinery process that are contained in line 7 of the tables. That is, refinery inputs are understated by the amount transferred to refinery feedstock as reported in the RPP.

la production d'électricité. Seule l'énergie nécessaire pour surchauffer la vapeur afin de l'utiliser dans une turbine ou un générateur est prise en compte dans ces estimations. On obtient donc des rendements de 65 à 70% qui contrastent avec la production des compagnies d'électricité où toutes les pertes de chaleur sont imputées à la production d'électricité, donnant des rendements variant entre 30 et 40% dans la plupart des cas.

Dans le cas de la majeure partie de la production d'électricité à partir de turbines à gaz et de moteurs à combustion interne, les rendements signalés sont de l'ordre de 20 à 35%, aussi bien pour les compagnies d'électricité que pour l'industrie. Cependant, certaines turbines à gaz nouvellement conçues ont un rendement de 70 à 80%.

Total primaire et secondaire (colonne 12). Il s'agit de la somme des diverses sources d'énergie primaires et secondaires, colonnes 1 à 11. Les valeurs de la production et de la disponibilité ne sont pas présentées étant donné qu'elles entraîneraient un double comptage des combustibles qui sont une forme d'énergie primaire et qui sont utilisés pour produire une forme d'énergie secondaire.

Tableaux C et D - Produits pétroliers raffinés

Conformément aux exigences en matière de confidentialité, les données des Territoires du Nord-Ouest et de la Saskatchewan ne sont plus publiées pour certains postes relativement au pétrole brut et la production de produits pétroliers raffinés (PPR). Bien que les données agrégées sur les PPR ne figurent plus dans la présente publication, elles sont disponibles dans la publication sur les produits pétroliers raffinés.

Le poste **autres ajustements**, ligne 7, combine divers postes de PPR et est composé comme suit:

- + arrivages des sociétés déclarantes
- + arrivages des sociétés non déclarantes
- livraisons aux sociétés déclarantes
- pertes et ajustements
- transferts à l'alimentation

Une comparaison des intrants des raffineries (ligne 12, tableaux A et B) par rapport à la production de produits pétroliers raffinés, tableaux B et C, ligne 1, présente un gain volumétrique surévalué dans le procédé de raffinage. Ce dernier provient jusqu'à un certain point des produits partiellement raffinés utilisés comme intrants dans le procédé de raffinage, contenus à la ligne 7 des tableaux. C'est-à-dire que les intrants de raffinerie sont sous-évalués par la quantité transférée à l'alimentation de la raffinerie, telle que signalée dans les PPR.

The result of this change in presentation has been that the **statistical difference** in most instances has been reduced and that availability less producers consumption will now agree with **net sales** as presented in the RPP, with the following exceptions:

- interprovincial transfers may be modified to reflect movements which are indicated by supplementary data used in the completion of the demand section of the tables.
- stock changes for diesel, light fuel oil and heavy fuel oil may include changes in inventory held by electric utility stations.
- additional information on oil products produced and used in the oil sands/non-conventional sector of the oil and gas industry are included. Estimates of the crude oil that would have been needed to produce these non-refinery products has also been included and consequently data on crude oil supply and disposition contained in this publication may differ from that shown in the RPP and **Crude Oil and Natural Gas** publications.
- timing of data selection can affect the calculation of supply data. That is, the inclusion or exclusion of RPP revisions may cause different results.

These tables summarize the activity of Canadian petroleum refineries and the imports of petroleum products. The supply data for all products are derived from monthly **Refined Petroleum Products** and from administrative records. Disposition data are from a quarterly survey of the respondents to the monthly survey.

Because of confidentiality and because of the way in which certain fuels are used, a specific method of combining industries has been employed in the body of this publication. This pattern is detailed in Text Table I at the end of these notes.

Refinery LPGs (Liquified petroleum gases) (column 1). The disposition data is combined with that of NGLs in column 4 of Tables A and B. See notes for Table 14.

Par suite de ce changement de présentation, la **différence statistique** a été plus faible dans la plupart des cas et la disponibilité, moins l'autoconsommation, correspondra dorénavant aux **ventes nettes** telles que présentées dans les PPR, sauf dans les cas suivants:

- Les transferts interprovinciaux seront modifiés le cas échéant pour refléter les mouvements qui ressortent des données supplémentaires utilisées pour compléter la section des tableaux ayant trait à la demande.
- Les variations des stocks de carburant diesel, de mazout léger et de mazout lourd pourront inclure les variations des stocks détenus par les centrales électriques.
- Des renseignements additionnels au sujet des produits oléagineux fabriqués et utilisés dans le secteur des sables bitumineux et le secteur non classique de l'industrie pétrolière et gazière sont inclus. Les estimations de la quantité de pétrole brut qui aurait été requise pour fabriquer ces produits sont aussi présentes et, par conséquent, les données sur l'offre et l'écoulement de pétrole brut dans cette publication diffèrent des chiffres des PPR et de la publication **Production de pétrole brut et de gaz naturel**.
- Le moment de la sélection des données influencera parfois le calcul des données sur la disponibilité. Autrement dit, les résultats pourront varier selon que l'on aura ou non pris en compte les révisions pour les PPR.

Ces tableaux résument l'activité des raffineries de pétrole canadiennes et les importations de produits pétroliers. Les données sur l'offre pour tous les produits proviennent de la publication mensuelle **Produits pétroliers raffinés** et des registres administratifs. Les données sur l'écoulement proviennent d'une enquête trimestrielle faite auprès des répondants à l'enquête mensuelle.

A cause des exigences en matière de confidentialité, ainsi que la façon dont certains combustibles sont utilisés, on a eu recours à une méthode particulière de combinaison des industries pour la publication des chiffres dans ce bulletin. Ce schéma est indiqué au tableau explicatif I et à la fin des présentes notes.

GPL des raffineries (gaz pétroliers liquéfiés) (colonne 1). Les données sur l'utilisation sont combinées à celles des LNG, à la colonne 4 des tableaux A et B. Voir notes pour le tableau 14.

Still Gas (column 2). Almost all still gas is used within the producing refinery; only small amounts are being sold, and these appear as interproduct transfers.

Kerosene & Stove Oil and Light Fuel Oil (columns 4 and 6). Since only small amounts are used within the manufacturing sector, and in most instances are confidential, all usage in manufacturing is shown as other manufacturing.

(Total) Non-energy Products (column 11). For the summation of all refinery products, the total column of Table E is repeated here. See Table E. Data for the individual products presented in Table E are converted to terajoules and summarized for inclusion here in the terajoule portion of this table.

Total Products (column 12). This column is the summation of the individual products, columns 1 to 11. Excluded is the disposition of propane and butane which are shown under Gas Plant NGLs. This column is carried forward as column 11 of Tables A and B.

Table E - Non-Energy Refined Petroleum Products

Although this table shows the final sector of disposition, **all of the usage** is non-energy use. When shown in Tables C and D all usage is considered to be non-energy use and is included in line 16.

Petrochemical Feedstocks (column 1 or 7). Refinery gases or other first derivatives of petroleum for use as raw material for further processing. Includes LPGs, crude tops, crude bottoms, lube oils for recycling and any other product used as petrochemical feedstock.

Naphtha Specialties (columns 2 or 8). Industrial and commercial solvents, lighting naphtha, mineral spirits and paint thinners. Since the largest portion of these items is used in the commercial sector (dry cleaning plants), the total is attributed to this use.

Lubricating Oils and Greases. All oils and greases of petroleum origin manufactured or sold for lubricating purposes.

Gaz de distillation (colonne 2). Presque tous les gaz de distillation sont utilisés à l'intérieur de la raffinerie qui les produit; seules de faibles quantités sont vendues, et ces quantités apparaissent dans les transferts inter-produits.

Mazouts pour poêles et mazouts légers (colonnes 4 et 6). Étant donné que seules de faibles quantités sont utilisées dans le secteur de la fabrication, et que dans la plupart des cas ces données sont confidentielles, tout usage dans ce secteur est indiqué dans la rubrique manufacturier-autres.

(Total) Produits non énergétiques (colonne 11). La colonne total du tableau E est répétée pour faire la somme de tous les produits de raffinerie. Voir tableau E. Les données relatives à chaque produit, présentées au tableau E, sont converties en térajoules et résumées pour être incluses ici dans la partie térajoule du tableau.

Total des produits (colonne 12). Cette colonne est la somme de tous les produits, colonnes 1 à 11, à l'exception de l'utilisation du propane et du butane, qui sont présentées dans la rubrique LGN des usines de gaz. Cette colonne est transportée à la colonne 11 des tableaux A et B.

Tableau E - Produits pétroliers raffinés non énergétiques

Bien que ce tableau présente le secteur final de l'utilisation, **toute l'utilisation** est non énergétique. Lorsqu'elle est présentée dans les tableaux C et D, toute l'utilisation est considérée comme étant une utilisation non énergétique et incluse à la ligne 16.

Alimentation pétrochimique (colonne 1 ou 7). Les gaz de raffinerie ou autres premiers dérivés du pétrole utilisés comme matière première en vue d'un traitement ultérieur. Comprend les GPL, les produits de tête, les produits de queue, les huiles de lubrification pour le recyclage et tout autre produit utilisé comme alimentation pétrochimique.

Produits spéciaux - base-naphte (colonne 2 ou 8). Les solvants industriels et commerciaux, le naphte utilisé pour l'éclairage, les alcools minéraux et les diluants pour peintures. Étant donné que la majeure partie de ces produits sont utilisés dans le secteur commercial (usines de nettoyage à sec), la totalité est attribuée à cette utilisation.

Huiles et graisses lubrifiantes. Toutes huiles et graisses lubrifiantes d'origine pétroliers où vendu pour utilisations lubrifiantes.

Other Products (columns 5 or 10). Includes waxes, paraffin and unfinished products (items which cannot be identified in end product terms).

Autres produits (colonne 5 ou 10). Comprend les cires, les paraffines et autres produits non finis (postes qui ne peuvent être identifiés en termes de produit final).

Table F - Coal Details

The supply and usage of the various coal types are presented in natural units only. By applying the conversion factors for the various types of coal, for each province, data in this table is combined and presented as column 1 of Tables A and B.

Tableau F - Renseignements détaillés sur le charbon

L'offre et l'utilisation des divers types de charbon sont présentées en unités naturelles seulement. En appliquant les facteurs de conversion aux divers types de charbon, pour chaque province, les données de ce tableau sont combinées et présentées à la colonne 1 des tableaux A et B.

Table 16 - Details of Natural Gas Liquids

Data for the supply section of this table comes from various sources, the National Energy Board, the individual producing provinces, and administrative records. Disposition data are estimated based on known usage and consultation with the largest distributors. The validity of the usage estimates is a function of classifications and regionalization used by the distributors, and the ability in determining the final consumers.

Data in lines 1 to 12 and 15 are for gas plants only. Refinery produced propane and butane supply items are shown in Tables C and D, column 1. Line 13 of this table, Table 14, allows the entry of the refinery produced products into the gas plant stream. This line is the availability less producers consumption of propane and butane shown in Tables C and D.

Tableau 16 - Détails des liquides de gaz naturels

Les données pour la section de ce tableau portant sur l'offre proviennent de diverses sources: l'Office national de l'énergie, les provinces productrices et les registres administratifs. Les données sur l'écoulement sont calculées à partir des données connues sur l'utilisation et en consultation avec les plus gros distributeurs. La validité des estimations de l'utilisation dépend des classifications et de la régionalisation utilisées par les distributeurs, et sur l'aptitude à cerner les consommateurs de bout de ligne.

Les données des lignes 1 à 12 et 15 se rapportent seulement aux usines de gaz. Les postes sur l'approvisionnement en propane et butane produits par les raffineries figurent à la colonne 1 des tableaux C et D. La ligne 13 du tableau 14 permet d'entrer les produits de raffinerie dans le flux de l'usine de gaz. Cette ligne représente la disponibilité moins l'autoconsommation de propane et de butane indiquée aux tableaux C et D.

Table 17 - Electricity Generated from Fossil Fuels

This table presents a breakdown of the thermal electricity generated from the various fossil fuels as presented in Tables A and B, column 11. Included are the amounts of electricity generated from fuel types excluded from the main tables, i.e. wood waste, spent pulping liquor, waste heat, blast furnace gas, petroleum coke, station services, etc.

The first section of the table presents the total generation by utilities and industry, by quarter. The second part presents the total and year-to-date generated by utilities only.

Tableau 17 - Électricité produite à partir de combustibles fossiles

Ce tableau présente une ventilation de l'électricité thermique produite à partir de divers combustibles fossiles, tel que présenté à la colonne 11 des tableaux A et B. On y trouve les quantités d'électricité produites à partir des types de combustibles, provenant des principaux tableaux, c.-à-d. les déchets de bois, la lessive de pâte épuisée, la chaleur résiduaire, les gaz des hauts fourneaux, le coke de pétrole, consommation de centrale, etc.

La première section du tableau présente la production totale par les compagnies d'électricité et l'industrie, par trimestre. La deuxième partie présente le total et le cumulatif de l'année pour les compagnies d'électricité seulement.

Table 18 - Primary Electricity Generation

This table presents the amount of electricity production shown in Tables A and B, column 5, which is of nuclear generation. Uranium used is based on the heat content as received annually from the utilities concerned. This data was formerly presented as part of Text Table II.

Table 19 - Wood Waste and Spent Pulping Liquor

The main tables of this publication do not include alternative energy sources, although it is estimated that these sources account for more than 7% of Canada's energy requirements. However, electricity produced by biomass has been included in the tables. For regional estimates of biomass usage in the period 1982-1983, refer to the 1987 issues of this publication, Text Table III.

Data shown here is the amount of wood waste and spent pulping liquor used by industries to generate process steam, steam for space heat as well as to produce electricity.

Data which is received is standardized based on heat content before inclusion in this publication.

Table 21 - Estimated Additions to Crude Oil

In the upstream oilsands and heavy oil extraction processes, fuel of own production is used. Natural gas/hydrocarbon gas is obtained during the separation stage of the production of heavy crude from the steam injection process. Natural gas/hydrocarbon gas, diesel/synthetic crude/naphtha are obtained during the separation stages of the oilsand extraction, which are used by the producing plants.

During the processing in the oilsands plants and in the heavy oil upgraders, hydrogen treatment of the heavy crude is carried out, a process which results in a volumetric gain in the amount of crude oil which the plants produce.

Tableau 18 - Production d'électricité primaire

Ce tableau présente la quantité d'électricité produite, indiquée à la colonne 5 des tableaux A et B, qui est la production nucléaire. L'uranium utilisé est calculé en fonction de la teneur en chaleur reçue annuellement par les compagnies concernées. Ces données ont été officiellement présentées dans le cadre du tableau explicatif II.

Tableau 19 - Déchets de bois et lessive de pâte épuisée

Les principaux tableaux de cette publication ne contiennent pas les sources d'énergie de remplacement, bien que l'on évalue que ces sources répondent à plus de 7% des besoins énergétiques du Canada. Cependant, l'électricité produite par la biomasse a été incluse dans les tableaux. Pour les évaluations régionales de l'utilisation de la biomasse au cours de la période de 1982-1983, il faut se référer aux numéros de 1987 de cette publication, tableau explicatif III.

Les données présentées dans ce tableau sont la quantité de déchets de bois et de lessive de pâte épuisée utilisée par les industries pour produire de la vapeur de procédé, de la vapeur pour le chauffage ambiant et de l'électricité.

Les données reçues ont été normalisées en fonction de la teneur en chaleur avant d'être introduites dans cette publication.

Tableau 21 - Ajouts estimatifs à la production de pétrole brut

Dans les processus en amont d'extraction du pétrole brut et des sables bitumineux, on utilise du combustible de production propre. On obtient du gaz naturel/d'hydrocarbures pendant l'étape au cours de laquelle le pétrole lourd est séparé du processus d'injection de vapeur. Le gaz naturel/d'hydrocarbures, le diesel, le pétrole brut synthétique et le naphtha sont obtenus pendant les étapes de séparation du processus d'extraction des sables bitumineux qu'utilisent les usines de production.

Dans les usines de traitement de sables bitumineux et les usines de valorisation du pétrole lourd, un traitement d'hydrogène du pétrole lourd est effectué; il s'agit d'un processus qui entraîne un gain volumétrique de la quantité de pétrole brut que l'usine produit.

This table provides the volumes of these usages/gains reported in the main tables of this report as an increase in production or interproduct transfers, with disposition reported as producer consumption or as usage in the mining industry. The volumetric gain in the crude oil due to the hydrogen treatment is shown as a reduction in crude production and an interproduct transfer into the crude oil stream.

Advance Information

It is possible to obtain most of the information contained in this publication some two to three weeks before it is available in printed form. The Canadian Socio-Economic Information Management System (CANSIM), which is Statistics Canada's computerized data bank, contains data in natural units for tables A, C, E and F in matrices 4950 to 4962. For data in terajoules for tables A and C refer to matrices 7976 to 8001. Data on uses of lubricating oils and greases can be found in matrices 4945 and 4946.

Le tableau présente les emplois et les gains qui figurent dans les principaux tableaux du présent rapport comme une hausse de la production ou des transferts inter-produits, l'utilisation déclarée étant l'autoconsommation ou l'emploi dans l'industrie minière. Le gain volumétrique de la quantité de pétrole brut attribuable au traitement d'hydrogène est présenté comme une réduction de la production de pétrole brut et un transfert inter-produit dans le circuit du pétrole brut.

Information anticipée

Il est possible d'obtenir certaines informations contenues dans cette publication, trois ou quatre semaines avant la copie imprimée. Le Système canadien d'information socio-économique (CANSIM), qui est la banque de données informatisée de Statistique Canada, renferme des données en unités naturelles pour les tableaux A, C, E et F, aux matrices 4950 à 4962. Se reporter aux matrices 7976 à 8001 pour les données en térajoules des tableaux A et C. Les données sur l'utilisation des huiles et graisses lubrifiantes se trouvent aux matrices 4945 et 4946.

From 1986 to 1992 was added to crude oil production and flowed through to total mining in the petroleum coke column.

For 1993 is added to crude oil other adjustments and flowed through to total mining in the petroleum coke column.

Pour la période de 1986 à 1992, la production de coke de pétrole était incluse dans la production de pétrole brut et entré dans la production minière totale (voir la colonne relative au coke de pétrole). Pour l'année 1993, la production de coke de pétrole brut est incluse comme autres ajustement dans la production de pétrole brut et entré dans la production minière totale (voir la colonne relative au coke de pétrole).

From 1986 to 1992 was added to crude oil production and flowed through to total mining in the diesel column.

For 1993 is added to crude oil other adjustments and flowed through to total mining in the diesel column.

Pour la période de 1986 à 1992, les données étaient additionnées à la production de pétrole brut et entré dans la production minière totale (voir la colonne relative au diesel). Pour l'année 1993, les données sont additionnées aux autres ajustement de pétrole brut et entré dans la production minière totale (voir colonne relative au diesel).

Interproduct transfers from the natural gas stream to the crude oil stream, an addition to line 6, and a deletion from other adjustments of crude oil (to prevent double counting), line 7.

Échanges inter-produits entre la circulation du gaz naturel et du pétrole brut, une addition pour la ligne 6, et une suppression des autres ajustements de pétrole brut (afin de prévenir tout double-compte), ligne 7

Crude oil production for own use in natural units (as above) plus petroleum coke in natural units (as above) plus diesel in natural units (as above).

Less interproduct transfers from natural gas in natural units (as above).

Production de pétrole brut pour autoconsommation en unités (voir ci-haut) plus le coke de pétrole en unités (voir ci-haut) plus le diesel en unités (voir ci-haut) moins les transferts inter-produits de gaz naturel en unités (voir ci-haut).

Definitions

Inter-regional Transfers ligne 4. Shows the net movement of product in and out of the province with relation to other provinces.

Interproduct Transfers ligne 6. Shows the transfer of similar products between different product forms, eg. still gas to natural gas, natural gas to produce hydrogen in petroleum refineries.

Other Adjustments ligne 7. There are varying factors depending on the product. In all cases cyclical billing, or timing differences can/are included here. Includes losses in transportation, metering differences, and in the case of crude oil, sales to non-refineries. For refined petroleum products see notes on Tables C and D in the Notes On Individual Tables section at the front of the publication.

Availability ligne 8. The amount which was available for use. The summation of lines 1, 3, 4, 6 and 7 less lines 2 and 5.

Net Supply ligne 14. The amount "available" after the amounts used in transformation processes are subtracted. Line 8 less lines 9 to 13.

Producers Consumption ligne 15. Producer consumption as measured here is the consumption by the producing industry of its own produced fuel - for example refined petroleum products consumed by the petroleum refining industry, or field and plant flare and usage by the natural gas industry. It does not include consumption of energy forms produced by other energy supply industries - for example, it would exclude the use of natural gas by the petroleum refining industry. In the case of electricity it includes transmission losses, adjustments, "unaccounted for" amounts which are subject to variation because of cyclical billing, etc., but excludes generating station use output as measured at the "generating station gate". Included is shrinkage at gas plants.

Non-energy Use ligne 16. Amounts shown here are for amounts used for purposes other than fuel purposes. Includes products being used as petro-chemical feedstock, anodes/cathodes, greases, lubricants, etc.

Définitions

Transferts inter-régions ligne 4. Déplacement net des produits à l'intérieur et à l'extérieur de la province par rapport aux autres provinces.

Transferts inter-produits ligne 6. Transferts de produits semblables entre les diverses formes de produits, c.-à-d. gaz de fours vers gaz naturel, gaz naturel pour produire de l'hydrogène dans les raffineries de pétrole.

Autres ajustements ligne 7. Divers facteurs dépendent du produit. Dans tous les cas, cette ligne comprend la facturation proportionnelle ou les différences chronologiques. Elle comprend également les pertes dans le transport, les différences de lecture, et dans le cas du pétrole brut, les ventes aux non-raffineries. Voir les notes sur les tableaux C et D, dans la section des Notes sur les tableaux, au début de la publication, pour les produits pétroliers raffinés.

Disponibilité ligne 8. Quantité qui était disponible pour utilisation. La somme des lignes 1, 3, 4, 6 et 7, moins les lignes 2 et 5.

Disponibilité nette ligne 14. Quantité disponible après soustraction des quantités utilisées dans les procédés de transformation. Ligne 8 moins lignes 9 à 13.

Autoconsommation ligne 15. L'autoconsommation mesurée ici est la consommation par l'industrie du combustible qu'elle produit - par exemple, les produits pétroliers raffinés consommés par l'industrie de raffinage du pétrole, ou le gaz brûlé et utilisé sur le terrain et dans l'usine par l'industrie du gaz naturel. Les quantités indiquées ne comprennent pas la consommation des formes d'énergie produites par d'autres industries d'approvisionnement en énergie - par exemple, ces chiffres excluent l'utilisation du gaz naturel par l'industrie du raffinage du pétrole. Dans le cas de l'électricité, ils comprennent les pertes de transmission, les ajustements, les quantités non imputées sujettes à certaines variations à cause de la facturation proportionnelle, etc., mais excluent les extrants de l'utilisation de la station productrice mesurés à la porte de la station productrice. Les pertes en cours de traitement dans les usines de gaz sont incluses.

Usage non énergétique ligne 16. Les quantités présentées dans ce tableau sont celles utilisées à des fins autres que combustibles. Ces quantités comprennent des produits utilisés comme alimentation pétrochimique, anodes/cathodes, graisses, lubrifiants, etc.

Energy Use - Final Demand line 17. The summation of the usage in lines 18 to 45.

Total Mining line 19. Includes metal mines, non metal mines, coal mines, crude petroleum and natural gas industries, stone quarries, gravel pits and contract drilling operations. SICs 061, 062, 063, 071, 081, 0911 and 0921.

Pulp and Paper and Sawmills line 20. Includes establishments in the sawmill and pulp and paper industries. SICs 2512 and 271.

Iron and Steel line 21. Establishments operating blast furnaces, casting mills, rolling mills or coke ovens operated in association with blast furnaces. SIC 291.

Smelting and Refining line 22. Establishments engaged in the primary production of aluminum and in the refining of non-ferrous metals. SIC 295.

Cement line 23. Establishments engaged in the manufacturing of (hydraulic) cement. SIC 352. This classification does not include concrete nor ready mix concrete operations.

Petroleum Refining Line 24. Establishments engaged in manufacturing refined petroleum products including fuels and blended oils and greases. SIC 361.

Chemicals line 25. Establishments engaged in manufacturing industrial organic and inorganic chemicals and chemical fertilizers. SICs 371 and 3721.

Other Manufacturing line 26. All other manufacturing industries not listed above. SICs 101 to 399 less 2512, 271, 295, 352, 361, 371 and 3721. In some instances this classification is used when no breakdown of the component manufacturing industries is provided.

Total Manufacturing line 27. The summation of manufacturing industries, lines 20 to 26.

Construction line 29. SICs 401 to 429. Sales of asphalt, in Table E, for paving purposes regardless of the purchaser are included here.

Total Industrial line 30. The total of the usage in the Mining, Manufacturing, Forestry and Construction sectors, lines 19, 27, 28 and 29.

Usage énergétique - demande finale ligne 17. La somme des usages des lignes 18 à 45.

Total minier ligne 19. Les mines de métaux, les mines de non métaux, les mines de charbon, l'industrie du pétrole brut et du gaz naturel, les carrières de pierres, les carrières de gravier et les activités de forage à forfait. CTI 061, 062, 063, 071, 081, 082, 0911 et 0921.

Pâtes et papier et scieries ligne 20. Les établissements des industries de sciage du bois et de pâtes et papiers. CTI 2512 et 271.

Sidérurgie ligne 21. Les établissements exploitant des hauts fourneaux, des fours de moulage, des fonderies, des lamineries ou des fours à coke exploités conjointement avec des hauts fourneaux. CTI 291.

Fonte et affinage ligne 22. Les établissements qui s'occupent de la production primaire d'aluminium et du raffinage des métaux non ferreux. CTI 291.

Ciment ligne 23. Les établissements qui s'occupent de la fabrication (hydraulique) du ciment. CTI 352. Cette classification ne comprend pas le béton ni les centrales à béton.

Raffinage pétrolier ligne 24. Les établissements qui s'occupent de la fabrication de produits pétroliers raffinés, notamment les carburants et les huiles et graisses mélangées. CTI 361.

Produits chimiques ligne 25. Les établissements qui s'occupent de la fabrication de produits chimiques industriels organiques et inorganiques et de fertilisants chimiques. CTI 371 et 3721.

Manufacturier - autres ligne 26. Toutes les autres industries manufacturières non énumérées ci-dessus. CTI 101 à 399 moins 2512, 271, 295, 352, 361, 371 et 3721. Dans certains cas, cette catégorie est utilisée lorsqu'il n'y a pas de répartition des industries manufacturières particulières.

Total manufacturier ligne 27. La somme des industries manufacturières, lignes 20 à 26.

Construction ligne 29. CTI 401 à 429. Les ventes d'asphalte, au tableau E, à des fins de pavage, quel que soit l'acheteur.

Total industriel ligne 30. Le total des utilisations dans les secteurs des mines, de la fabrication, de la foresterie et de la construction, lignes 19, 27, 28 et 29.

Canadian Airlines ligne 32. Domestic airlines engaged in the transportation of passengers, freight, express or mail. SICs 4511 and 4512, excluding foreign airlines. Excluded are establishments engaged in providing specialty flying services such as aerial photography, surveying, air taxi, flying clubs, flying schools, recreation flying etc. which are included in line 45 "Commercial and Other Institutional". Aerial crop spraying/crop dusting are considered to be Agriculture, line 42.

Domestic Marine ligne 35. Ships of Canadian registry (flag) engaged in the transportation of passengers or freight including ferry operations and fishing. SICs 031 and 454. Excluded are usage by National Defense and the Canadian Coast Guard, which are included in line 44.

Pipelines ligne 38. Establishments primarily engaged in operating pipelines for the transport of natural gas, crude oil and petroleum products and in the distribution of natural gas. SICs 461 and 492.

Road Transport and Urban Transit ligne 39. Establishments engaged in the provision of local and long distance trucking, transfer, in operating interurban/urban bus and coach lines and in furnishing taxicab services. SICs 456, 457 and 458.

Transportation ligne 41. In this sector, lines 31 to 40, only the use of fuel by the transportation industry for transportation purposes are included. Excluded are any fuels used for activities not directly involved in transportation, eg. train stations, warehouses, airports, etc. These amounts are included in line 45. Fuels which have been purchased for use by the agriculture, commercial and public institutions sectors for transportation purposes are included in the sectors to which the fuel was sold.

Agriculture ligne 42. Establishments engaged in agricultural activity as well as those engaged in providing services to agriculture. Includes mushroom growers, greenhouses and nurseries. SICs 011 to 023.

Public Administration ligne 44. All federal, provincial and local governments primarily associated with public administration. Includes the public service, RCMP, National Defense and the Coast Guard. SICs 811 to 841.

Residential ligne 43. Includes all residents; homes, duplexes, apartments, apartment hotels, condominiums and farm homes.

Lignes aériennes canadiennes ligne 32. Toutes les ventes aux établissements canadiens qui s'occupent principalement du transport de passagers, de marchandises, de messagerie ou de courrier par voie aérienne. CTI 4511 et 4512, sauf les sociétés d'aviation étrangères. Ne pas inclure les ventes aux établissements qui s'occupent principalement de fournir des services aériens spéciaux comme la photographie, l'arpentage et le taxi, les aéroclubs et les écoles de pilotage, qui doivent être incluses à la ligne 45 **Commerces et autres institutions**. La pulvérisation ou le poudrage des cultures à partir d'aéronefs sont considérés comme de l'agriculture, ligne 42.

Lignes maritimes domestiques ligne 35. Navires enregistrés au Canada (battant pavillon canadien) qui s'occupent principalement du transport de passagers ou de marchandises, y compris les bacs, les traversiers et les bateaux de pêche. CTI 031 et 454. Ne pas inclure les navires utilisés par la Défense nationale et la Garde côtière canadienne qui se trouvent à la ligne 44.

Pipelines ligne 38. Les établissements qui s'occupent principalement de l'exploitation de pipelines pour le transport de gaz naturel, pétrole brut et produits pétroliers, et dans la distribution du gaz naturel. CTI 461 et 492.

Transport commercial et en commun ligne 39. Les établissements qui s'occupent principalement de la prestation d'un service de camionnage sur courtes ou longues distances, de transfert, de l'exploitation d'autobus interurbains et urbains et d'excursions, et les services de taxis. CTI 456, 457 et 458.

Transport ligne 41. Dans ce secteur, lignes 31 à 40, seule l'utilisation du carburant par l'industrie des transports à des fins de transport est incluse. Tout combustible utilisé pour des activités non liées directement au transport, comme les gares ferroviaires, les entrepôts, les aéroports, etc., est exclu. Ces quantités sont incluses à la ligne 45. Les carburants achetés pour l'agriculture, les institutions commerciales et les institutions publiques à des fins de transport sont inclus dans les secteurs pour lesquels le carburant a été vendu.

Agriculture ligne 42. Les établissements qui s'occupent de l'activité agricole ainsi que ceux qui fournissent des services à l'agriculture. Elle comprend les producteurs de champignons, les serres et les pépinières. CTI 011 à 023.

Administration publique ligne 44. Tous les gouvernements fédéral, provinciaux et locaux principalement associés à l'administration publique. Elle comprend la Fonction publique, la GRC, la Défense nationale et la Garde côtière. CTI 811 à 841.

Domestique ligne 43. Cette catégorie comprend toutes les résidences; maisons, duplex, appartements, appartements-hôtels, condominiums et maisons de ferme.

Commercial and Other Institutional line 45. Final consumers other than those listed in lines 18 to 44. This includes service industries related to mining, transportation, as well as storage and warehousing, communications and utility (excluding electricity and natural gas), wholesale and retail trade, finance and insurance, real estate and business service, education, health and social services and other service industries. SIC divisions I, J, K, L, M, O, P, Q, and R, as well as 0919, 0929, 4513, 4529, 4532, 441, 449, 455, 471, 481 to 484, 493 and 499.

Commerces et autres institutions ligne 45. Consommateurs finals autres que ceux énumérés aux lignes 18 à 44. Elle comprend les industries de service liées à l'extraction minière, aux transports ainsi qu'au stockage et à l'entreposage, aux communications et aux services (à l'exception de l'électricité et du gaz naturel), à la vente au détail et au commerce de gros, aux finances et à l'assurance, au secteur immobilier et aux services commerciaux, à l'éducation, à la santé et aux services sociaux et autres industries de services. Divisions I, J, K, L, M, O, P, Q et R du CTI ainsi que 0919, 0929, 4513, 4529, 4532, 441, 449, 455, 471, 481 à 484, 493 et 499.

Women in Canada

Two Decades of Change

Recent decades have witnessed dramatic changes in the roles women play in Canadian society. There have been considerable improvements in the social and economic situation of women in the last two decades, however, gaps continue to exist between many leading socio-economic indicators for women and men. No other publication chronicles the changing status of women more clearly than **Women in Canada**:

This 180-page portrait examines a wide range of topics in women's lives including:

- housing
- income
- family status
- health
- education
- criminal victimization
- labour force characteristics

In addition, the report presents separate sections on:

- immigrant women
- women in visible minorities
- Aboriginal women
- women with disabilities

More than just facts!

Women in Canada offers the most in-depth, accurate information available on women today. With its easy-to-read format, and over 200 charts and tables, you'll discover many essential facts about the changing status of women over the last two decades.

Being aware of the roles, status and lifestyles of Canadian women is essential for **planning and implementing appropriate social policies**, for **developing successful marketing strategies**, or for simply **gaining a better appreciation** of how Canadian society has changed.

Women in Canada (89-5030XPE, issue # 95001) is available in Canada for \$49 (plus PST & GST), US \$59 in the United States, and US \$69 in other countries.

Femmes au Canada

Deux décennies de changements profonds

Au cours des décennies récentes, les rôles que jouent les femmes dans la société ont subi des bouleversements profonds. La situation sociale et économique des femmes s'est améliorée

considérablement pendant les deux dernières décennies; cependant, il existe toujours un fossé entre les nombreux indicateurs sociaux et économiques qui s'appliquent aux hommes et aux femmes. Aucune autre publication ne retrace l'évolution des femmes aussi soigneusement que **Les femmes au Canada**.

Ce tout dernier rapport de 180 pages traite des divers aspects de la vie des femmes, notamment :

- les caractéristiques de la population active
- le revenu
- la famille
- la santé
- le logement
- l'éducation
- la victimisation

De plus, ce rapport comporte des sections distinctes:

- sur les immigrantes
- les membres de minorités visibles
- les femmes autochtones
- les femmes ayant une incapacité.

Les faits... et encore plus!

Les femmes au Canada vous fournit l'information la plus détaillée et la plus exacte qui soit sur les femmes d'aujourd'hui. Ouvrage de lecture facile, il contient plus de 200 tableaux et graphiques sur les points clés de l'évolution des femmes au cours des deux dernières décennies.

Connaître les rôles, les situations et les modes de vie des femmes canadiennes constitue un élément essentiel pour ce qui est de la planification et la mise en oeuvre des politiques sociales opportunes, l'élaboration des stratégies efficaces de marketing, et la compréhension des transformations qui ont marqué la société canadienne.

Les femmes au Canada (numéro au catalogue 89-5030XPF, numéro de l'édition 95001) est disponible au coût de 49 \$ (TPS et TVP en sus) au Canada, 59 \$ US aux États-Unis et 69 \$ US dans les autres pays.

SERVICES INDICATORS

For and About Businesses Serving the Business of Canada...

At last, current data and expert analysis on this VITAL sector in one publication!

The services sector now dominates the industrial economies of the world. Telecommunications, banking, advertising, computers, real estate, engineering and insurance represent an eclectic range of services on which all other economic sectors rely.

Despite their critical economic role, however, it has been hard to find out what's happening in these industries. Extensive and time-consuming efforts have, at best, provided a collection of diverse bits and pieces of information... an incomplete basis for informed understanding and effective action.

Now, instead of this fragmented picture, *Services Indicators* brings you a cohesive whole. An innovative quarterly from Statistics Canada, this publication **breaks new ground**, providing timely updates on performance and developments in:

- Communications
- Finance, Insurance and Real Estate
- Business Services

Services Indicators brings together analytical tables, charts, graphs and commentary in a stimulating and inviting format. From a wide range of key financial indicators including profits, equity, revenues, assets and liabilities, to trends and analysis of employment, salaries and output – PLUS a probing feature article in every issue, *Services Indicators* gives you the complete picture for the first time!

Finally, anyone with a vested interest in the services economy can go to *Services Indicators* for **current** information on these industries... both at-a-glance and in more detail than has ever been available before – all in one unique publication.

If your business is serving business in Canada, or if you are involved in financing, supplying, assessing or actually using these services, *Services Indicators* is a turning point – an opportunity to forge into the future armed with the most current insights and knowledge.

Order YOUR subscription to *Services Indicators* today!

Services Indicators (catalogue no. 63-0160XPB) is \$112 (plus 7% GST and applicable PST) in Canada, US\$135 in the United States and US\$157 in other countries.

To order, write to Statistics Canada, Operations and Integration Division, Circulation Management, 120 Parkdale Avenue, Ottawa, Ontario K1A 0T6 or contact the nearest Statistics Canada Regional Reference Centre listed in this publication.

If more convenient, fax your order to 1-613-951-1584 or call 1-800-267-6677 toll-free in Canada and the United States [1-613-951-7277 elsewhere] and charge to your VISA or MasterCard.

INDICATEURS DES SERVICES

Au sujet des entreprises au service des affaires du Canada et à leur intention...

Enfin regroupées en une publication, des données courantes et des analyses éclairées sur ce secteur ESSENTIEL!

Le secteur des services domine à l'heure actuelle les économies industrielles du monde. Les télécommunications, les opérations bancaires, la publicité, l'informatique, l'immobilier, le génie et l'assurance représentent une gamme éclectique de services sur lesquels reposent tous les autres secteurs économiques.

En dépit de leur rôle critique sur le plan économique, il est toutefois difficile de savoir ce qui se passe dans ces branches d'activité. Des efforts considérables et fastidieux ont permis, au mieux, de rassembler une collection de renseignements fragmentaires divers... qui ne favorisent pas la compréhension avisée et la prise de mesures efficaces.

Remplacez maintenant ce tableau fragmentaire par l'image cohérente que vous offre *Indicateurs des services*. Cette publication trimestrielle innovatrice de Statistique Canada **pénètre dans un domaine inexploré**, fournissant des aperçus opportuns du rendement et des progrès dans les domaines suivants :

- Communications
- Finance, assurance et immobilier
- Services aux entreprises

Indicateurs des services rassemble des tableaux analytiques, des diagrammes, des graphiques et des observations en un mode de présentation stimulant et attrayant. En puisant à même une vaste gamme d'indicateurs financiers importants, allant notamment des profits, des capitaux propres, des recettes, de l'actif et du passif aux tendances et analyses de l'emploi, des salaires et de l'extrant – à laquelle s'ajoute un article de fond exploratif dans chaque numéro, *Indicateurs des services* brosse pour la première fois un tableau complet!

Enfin, quiconque s'intéresse au secteur des services peut consulter *Indicateurs des services* pour trouver des renseignements **courants** sur ces branches d'activité... tant sous une forme sommaire qu'à un niveau de détail n'ayant jamais encore été offert – et ce, dans une même publication.

Si vous êtes de ceux qui fournissent des services aux entreprises canadiennes, ou si vous financez, fournissez ou évaluez ces services ou y avez en fait recours, *Indicateurs des services* représente un tournant – une chance de s'aventurer dans l'avenir en étant armé des réflexions et connaissances les plus actuelles.

Commandez dès aujourd'hui VOTRE abonnement à *Indicateurs des services*!

Indicateurs des services (n° 63-0160XPB au catalogue) coûte 112 \$ (plus 7 % de TPS et la TVP en vigueur) au Canada, 135 \$ US aux États-Unis et 157 \$ US dans les autres pays.

Pour commander, écrivez à Statistique Canada, Division des Opérations et de l'intégration, Direction de la circulation, 120, avenue Parkdale, Ottawa (Ontario) K1A 0T6, ou communiquez avec le Centre régional de consultation de Statistique Canada le plus près (voir la liste qui figure dans la présente publication).

Si vous préférez, vous pouvez télécopier votre commande en composant le 1-613-951-1584 ou téléphoner sans frais du Canada et des États-Unis au 1-800-267-6677 [ou d'ailleurs, au 1-613-951-7277] et porter les frais à votre compte VISA ou MasterCard.

Pick a topic... any topic

The **1994 Statistics Canada Catalogue** is your guide to the most complete collection of facts and figures on Canada's changing business, social and economic environment. No matter what you need to know, the **Catalogue** will point you in the right direction.

From the most popular topics of the day – like employment, income, trade, and education – to specific research studies – like mineral products shipped from Canadian ports and criminal victimization in urban areas – you'll find it all here.

... the 1994 Statistics Canada Catalogue will help you get your bearings...

The **Catalogue** puts all this information at your fingertips. With the expanded index, you can search by subject, author or title – even periodical articles are indexed. There's also a separate index for all our electronic products.

The **Catalogue** has everything you need to access all Statistics Canada's products:

- descriptions of over 25 new titles, plus succinct abstracts of the over 650 titles and 7 map series already produced;
- a complete guide to finding and using statistics;
- electronic products in a variety of media, and

advice on getting expert assistance on electronic products and on-line searches;

● tabs to each section -- so you can immediately flip to the information you need.

... time and time again

To make sure that the **Catalogue** stands up to frequent use, we used a specially coated cover to prevent broken spines, tattered edges and dog-eared corners.

Order today – you'll be lost without it.

1994 Statistics Canada Catalogue

Choisissez un sujet... n'importe lequel

Le **Catalogue de Statistique Canada 1994** est votre guide pour la collection la plus complète de faits et de chiffres dans les domaines, en constante évolution, du commerce, de la société et de l'économie du Canada. Peu importe ce que vous voulez savoir, le **Catalogue** vous mettra sur la bonne piste.

Des sujets actuels les plus populaires – comme l'emploi, le revenu, le commerce et l'éducation – à des études de recherche spécialisées – comme les produits minéraux expédiés des ports canadiens et la victimisation dans les régions urbaines – vous trouverez tout dans ce document.

Le Catalogue de Statistique Canada 1994 vous aidera à vous orienter...

Le **Catalogue** vous met tous ces renseignements sous la main. L'index augmenté vous permet de chercher par sujet, auteur ou titre – les articles de périodiques sont même indexés. On a aussi ajouté un index séparé pour tous nos produits électroniques.

Le **Catalogue** a tout ce qu'il vous faut pour vous procurer les produits de Statistique Canada :

- descriptions de plus de 25 nouveaux titres et courts résumés des 650 titres et plus et des 7 séries de cartes déjà disponibles;
- guide complet pour obtenir et utiliser les données statistiques;
- produits électroniques sur supports divers et conseils sur l'obtention d'aide d'experts pour

les produits électroniques et les recherches en direct;

● système d'onglets pour chaque section – pour que vous puissiez immédiatement repérer les renseignements qui vous intéressent.

...maintes et maintes fois

Pour garantir que le **Catalogue** puisse résister à une utilisation fréquente, nous avons utilisé une couverture avec un revêtement spécial conçue pour éviter les dos cassés, les bords abîmés et les coins de page pliés.

Commandez aujourd'hui – vous ne pourrez plus vous en passer.
